

Automation of manual operations prevalent in '**Open Market Sale Scheme (Domestic) Bulk**' process carried out in **Food Corporation of India.**

Project submitted as a part of the academic curriculum of 3rd Year, 2nd Semester of MBA in Information Technology and Systems Management

By:

Anindita Nath

Registration No: 121919 of 12-13
MBA, 3rd Year, 2nd Semester of 2015
Examination Roll No.-MBA 153201
Class Roll No.-29/48

Under the Guidance of:

Prof. Ashish Dutta

Asst. Professor, Information Technology & Systems Management
Institute of Business Management
National Council of Education, Bengal
Jadavpur University, Kolkata-700032

Title: Automation of manual operations prevalent in 'Open Market Sale Scheme (Domestic) Bulk' process carried out in Food Corporation of India.

Author: This research paper is purely the fruit of efforts of:

Ms. Anindita Nath

Student of Master of Business Administration in Information -
Technology and Systems Management

Registration No: 121919 of 12-13

MBA, 3rd Year, 2nd Semester of 2015

Examination Roll No.-MBA153201

Class Roll No.-29/48

Organization: This project is being conducted solely for:-

Institute of Business Management
National Council of Education, Bengal
Jadavpur University, Kolkata-700032

Purpose: The study is carried out purely for academic interest as a part of the academic curriculum of 3rd Year, 2nd Semester of **MBA in Information Technology and Systems Management** in the afore-mentioned institution.

Acknowledgement

I am using this opportunity to express my gratitude to everyone who supported me throughout the course of this MBA project "**Automation of manual operations prevalent in 'Open Market Sale Scheme (Domestic) Bulk' process carried out in Food Corporation of India.**"

I am thankful for their aspiring guidance, invaluable constructive criticism and friendly advice during the project work. I am sincerely grateful to them for sharing their truthful and illuminating views on a number of issues related to the project.

First of all, my immense gratitude is extended towards General Manager(R), Deputy General Manager(R), Asst. General Manager(Personnel) of Food Corporation of India, West Bengal Region for permitting me to conduct and complete the project in this organisation. Furthermore, I express my warm thanks to all officials/officers for their support, guidance and all-round cooperation at Food Corporation of India.

Next, I would like to thank all of those individuals from various fields -research assistants, students, software engineers and govt. Employees who took out time from their busy schedule to supply me with required inputs for developing the project.

I would like to express gratitude to the various research teams and consultants working on the same line of study for helping me from time to time with invaluable study materials and research data.

Thanks are also extended to the peers involved in other research projects who never failed to lend their helping hands whenever the need arose.

Finally, I would like to give sincere thanks and credit to my internal project guide Prof. Ashish Dutta, for the role he played in helping us develop the entire project and for his editorial role over the entire report and all the people who provided me with the facilities being required and conductive conditions for my MBA project.

Thank you,

Anindita Nath

Abstract

The advent of technology such as computers has revolutionized the world of business. The corporate world has forever been reaping the benefits of automated tools and software as they prove to be extremely beneficial and convenient over the manual process. Until very recently, government organizations were devoid of this bliss probably because of money and infrastructure constraints. However, slowly and gradually, the public sector organizations have realized what they have been missing and have already given office automation a positive nod.

This paper majorly concentrates on developing a software- a stand-alone application program named OMSS(D)_Bulk to automate the existing manual process related to **Bulk Sale of Wheat and Raw Rice Grade-A under OMSS(D)**, verifying its needs prior to that and finally, describing its beneficial impacts as and when implemented over the manual process.

Later, integration of this software program to include in it other manual operations of Food Corporation of India is also included as a further scope to this project.

Further, since the coverage of the entire organization under private LAN network just a few days back, the stand alone program may be upgraded to its online version and deployed on the LAN server so as to be shared , with proper security constraints like user name and password by the required personnel in the entire office.

I. Introduction

The modern history of office automation began with the typewriter and the copy machine, which mechanized previously manual tasks. Today, however, office automation is increasingly understood as a term that refers not just to the mechanization of tasks but to the conversion of information to electronic form as well. The advent of the personal computer revolutionized office automation, and today, popular operating systems and user interfaces dominate office computer systems. This revolution has been so complete, and has infiltrated so many areas of business, that almost all businesses use at least one commercial computer business application in the course of daily activity. Even the smallest companies commonly utilize computer technology to maintain financial records, inventory information, payroll records, and other pertinent business information. "*Workplace technology that started as handy (but still optional) business tools in the 1980s evolved into a high-priority requirement in the 1990s,*" summarized Stanley Zarowin in *Journal of Accountancy*. "*As we enter the new millennium, it has taken another quantum leap, going from a priority to a prerequisite for doing business.*"

2. Background Study

2.1 What is "Office Automation"?

1st definition:

"Office automation refers to the type of computer machinery and software used to digitally create, collect, store, manipulate, and relay office information needed for accomplishing basic tasks and goals. Raw data storage, electronic transfer, and the management of electronic business information comprise the basic activities of an office automation system."

2nd definition:

Office automation refers to the integration of office functions usually related to managing information. There are many tools used to automate office functions and the spread of electronic processors inside computers as well as inside copiers and printers is at the centre of most recent advances in office automation. Raw data storage, electronic data transfer, and the management of electronic business information comprise the basic activities of an office automation system.

3rd definition:

Office automation refers to the varied computer machinery and software used to digitally create, collect, store, manipulate, and relay office information needed for accomplishing basic tasks. Office automation helps in optimizing or automating existing office procedures.

2.2 Basics of "Office Automation"

Food Corporation of India

The word automation denotes replacement of human labour by machine. The mechanical operations in office with less human participation is termed as automation. The word mechanization and automation should not be considered as synonymous. Mechanization refers to a process whereby office machines and equipments are introduced in the office with a view to aid administrative processes.

But automation is something more than mechanization because automation is a self-regulated process in which the work is completed with minimum human efforts. The self-regulated process aims at continuous flow of information without minimum human intervention. So in brief the word automation denotes the art of recording, processing and controlling the information automatically by mechanical and electronic machine.

Generally, there are *three basic* activities of an office automation system:

- storage of information
- data exchange
- data management.

Within each broad application area, hardware and software combine to fulfil basic functions that are needed to successfully accomplish the goals for a specific business.

- Storage of information would be the computer or a computer like system.
- Data Exchange would be a fax, phone, or some type of communication hardware.
- Data management would be using specific software tools to organize and maintain data.

2.3 Need of "Office Automation"

Let us consider all the typical processes that occur within the office and now, imagine a scenario whereby all these activities are conducted manually. For example, if we need to communicate with the director on fourth floor while we are on second floor with no telephone, we will be required to climb up to the fourth floor to deliver the information. This makes the process cumbersome and uneconomical especially with regards to time. This is where office automation comes in and employs the use of equipment such as the computer, copier, and printers among other equipments.

Needs and Importance

The need for automation is felt because of the following reasons. These reasons emphasize on importance of automation. The reasons are:

- (a) Automation facilitates efficient and detailed information through the use of mechanical aids like computers.
- (b) It ensures speedy recording. Processing and presenting of information.
- (c) Increased volume of work, scarcity of time and the slow manual processes necessitate the introduction of automation.
- (d) It facilitates better quality work by reducing errors created otherwise manually.
- (e) Revolution in office has been brought about by automation because increased volume of work is handled in a better manner with greater accuracy and speed because of automation. This process results in increased output.
- (f) Automation increases the goodwill and reputation of the firm because it adds to the prestige and status symbol of the enterprise.

Two major factors motivate organizations to consider automated office systems.

The *first* is a critical need to improve the productivity of both clerical and managerial office employees. While office costs have doubled in the last ten years, office productivity has risen only four percent .It has been estimated that up to 95 percent of a manager's time is spent in written and verbal communication, much of which could be affected by office automation.

The *second* reason for interest in office automation is the increasing complexity of organizational decision making and information needs. The more traditional forms of communication such as telephone, mail, and person-to-person meetings may be ineffective for processing large volumes of information rapidly. In the future, this technology may be the only feasible way to deal with information processing in increasingly complex and rapidly changing organizational environments.

2.4 Considerations for "Office Automation"

OFFICE AUTOMATION CONSIDERATIONS: PEOPLE, TOOLS, AND THE WORKPLACE

Businesses engaged in launching or upgrading office automation systems must consider a wide variety of factors that can influence the effectiveness of those systems. These factors include *budgetary and physical space considerations*, and *changes in communication infrastructure*, among others. But two other factors that must be considered are *employee training and proliferating office automation choices*:

- Training—People involved with office automation basically include all users of the automation and all providers of the automation systems and tools. A wide range of people—including software and hardware engineers, management information scientists, executives, mid-level workers, and secretaries—are just a few of the people that use office automation on a daily basis. As a result, training of personnel on these office automation systems has become an essential part of many companies' planning. After all, the office automation system is only as good as the people who make it and use it, and smart business owners and managers recognize that workplace resistance to these systems can dramatically lessen their benefits. "It's true that as technology matures the need for special training will decline—because tomorrow's software and hardware will be much more intuitive and loaded with built-in teaching drills—that time is not here yet," wrote Zarowin. "Training is still essential."
- Choice—A dizzying array of office automation alternatives are available to businesses of all shapes, sizes, and subject areas. Such systems typically involve a sizable investment of funds, so it is wise for managers and business owners to undertake a careful course of study before making a purchase. Primary factors that should be considered include: cost of the system, length of time involved in introducing the system, physical condition of the facility into which the system will be introduced, level of technical support, compatibility with other systems, complexity of system (a key factor in determining allocations of time and money for training), and compatibility of the system with the business area in which the company is involved.

2.5 Essentials of "Office Automation"

If an office has moved from typewriters and facsimile to computers and emails, it has come a long way in office automation, but the office is not there just yet! Not if the office still runs its approvals over paper, from desk to desk, not if it takes weeks to start working collaboratively across dispersed teams. One just got down the bus midway through the entire office automation journey. Every repetitive and routine task can be automated.

Office automation systems add efficiency to daily office jobs, regardless of the departments and designations.

To get the most out of office automation, one need to look beyond just emails and document processing. Here are *5 aspects* to look out for while choosing office automation solution.

- *Designing operational flow:*

When one picks an office automation system, one should take a good look at it, does it read “create processes just as you want” anywhere? An automation system shouldn’t determine the flow of operations, instead, it should aid in refining the operational flow. One should look for a system that lets design workflows just as it suits one’s office.

- *Defining access controls:*

One would have access privileges at the office and so would every other member of the organisation. Access privileges are critical to every operation. One should look for an office automation system that permits defining access privileges along the flow of operations.

- *Setting up approval-strapped workflows:*

Is it even possible to complete processes without an approval? Everyday numerous processes go through cycles of approvals, it is imperative to have an office automation system which allows one to create structured approval process along the lines of one’s business’s operations.

- *Access anytime, anywhere:*

So one has an office automation system in place and the approver isn’t anywhere around. One can choose to wait and stall the flow of operations or choose a cloud based office automation system that would allow the approver to access it from anywhere at any time.

- *Integrate with existing solutions:*

One’s office automation system need not necessarily be ‘*yet another software used in the organisation*’ but should allow integration with the software tools used in the organisation, saving the pain of manually transferring data from one system to another.

2.6 Benefits of "Office Automation"

Computers have provided organizations with the ability to store and quickly retrieve information from a virtual database. Records are easily reached by keying in their unique identifiers reducing the time spent in accessing information. Further the said record will not only be accessed virtually but can also be printed out or sent through an email to an intended party to reach its destination within a very short time.

The following are the obvious advantages of automation over the existing manual processes are:

- ✓ Office automation can get many tasks accomplished faster.
- ✓ It eliminates the need for a large staff.
- ✓ Less storage is required to store data.
- ✓ Save Time and Company Resources

Since the introduction of office automation, the equipment has allowed businesses to save time and money. Instead of waiting for a document to reach a client by mail, one could shoot it over in a few minutes by fax. Now, computer advancements and the Internet have made communications instant. Whenever we save time, we save money. We are not constricted by geographical limitations, saving resources we spent on travel. Additionally, even though we still may make hard copies of many documents, digital storage allows you to save time and money on paper and storage space.

✓ Rely on Automation for Accuracy

While it's true that a machine is only as effective as the humans who made it and information gleaned digitally is only as accurate as the person who submitted it, once the bugs are worked out of programs, they are infinitely more reliable than humans. Software exists to add up numbers in spreadsheets and budgets, for example, that always come up with the correct balance and don't rely on a bookkeeper's fingers on the adding machine. Templates can be created and used over and over to avoid errors in standard documentation.

2.7 Disadvantages "Office Automation"

Automation is suited to the developed countries of the world which have attained a state of full employment phenomenon. In those countries, automation becomes necessary because of scarcity of manpower. Automation is not suggested for a developing country like India because here the state of unemployment is visualized and automation will increase this state of unemployment. But automation should be introduced in post offices, railways, banks where the increased workload necessitates quick and accurate service to the public. Automation leads the following adverse effects:

- a) Automation results in the state unemployment because human labour is replaced by mechanical work.
- b) It requires huge investment and as such it goes beyond the capacity of small scale firms to afford for automation.
- c) It brings about a complete change in the organizational structure and involves a great deal of additional cost.
- d) When the Automation Goes Awry, One is in Trouble-
Companies that rely exclusively on automation to operate and run their information systems can get into a panic when those very systems fail. The costs to fix or replace broken systems can be exorbitant. One can't just pick up an eraser and make corrections. One needs to either employ technicians to keep up with updates and software and hardware melt-downs, or have a reliable service to call on a moment's notice. Then you have the whole issue of confidentiality and security. You can keep trade secrets and tell only a few trusted individuals, but if data makes it out on the Web, there's no taking it back.
- e) Users Aren't Always Easy to Change-
As office automation continues to evolve and one incorporates new technologies into the systems to remain competitive and profitable, the disadvantage is that one have got to retrain one's entire cadre of users. Everyone from secretary to the order clerk and from customers to the salespeople who deliver the product or service must learn the new systems. Many people do not learn new systems easily and others are stubborn about doing things the way they always did. So while you have the expenses related to retraining, you also have the attitudes of the end users to combat.

3. Objective of the project

Objectives are:

- To assert the need and feasibility of automating one of the critical functioning process presently carried out manually viz. Sale of Wheat and Rice under OMSS(D) Bulk in Food Corporation of India.
- To develop a stand-alone application program named OMSS(D)_Bulk for the above and describe its working process in details.
- To state the beneficial impacts of the automated process over existing manual one as well as investigate ways to better the developed application and its functioning.

4. Scope of the project

The study covers the following areas:

- A basic understanding of one of the most critical operations of Sale of Wheat and Raw Rice Grade-A under OMSS(D) Bulk scheme carried out in Food Corporation of India.
- The study brings out the need and undertakes a feasibility study of automating the existing manual processes involved in the above operation.
- The project then concentrates on developing a simple yet effective stand-alone application to automate the existing manual process.
- The technology used and the detailed working process of the application developed follows.
- Beneficial effects when this application would be implemented over the manual one are stated.
- Ways of improving the application are suggested as a further scope.

5. An overview of the organization

Food Corporation of India

Company Profile

Mission

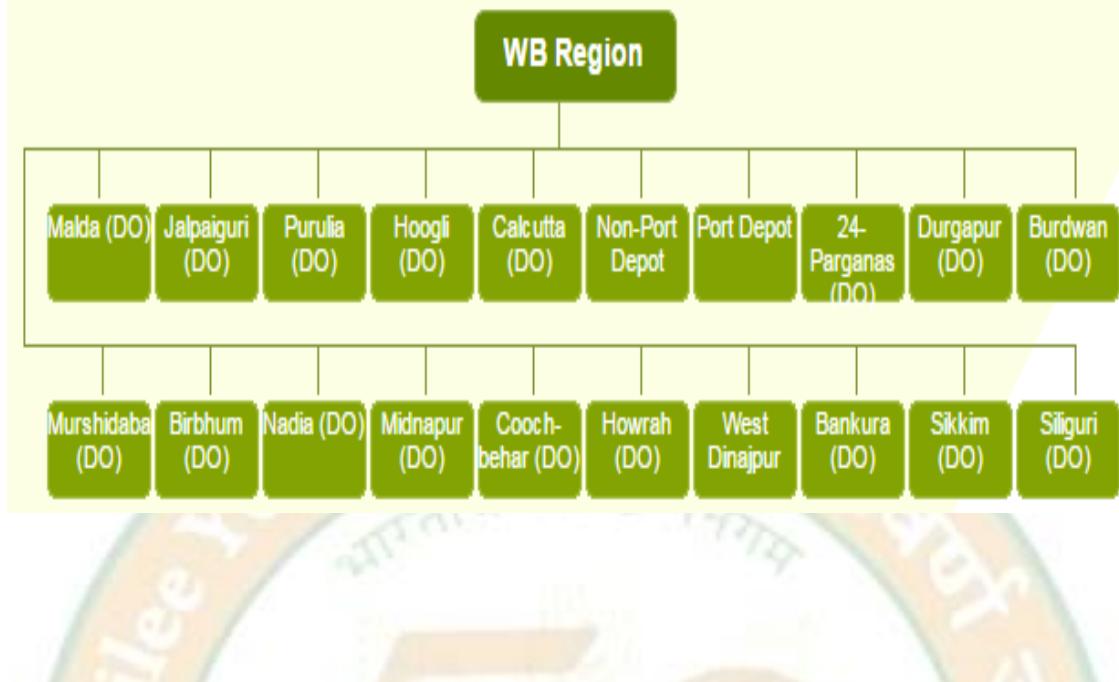

The Food Corporation of India was setup under the Food Corporation Act 1964, in order to fulfill following objectives of the Food Policy:

- Effective price support operations for safeguarding the interests of the farmers.
- Distribution of foodgrains throughout the country for public distribution system
- Maintaining satisfactory level of operational and buffer stocks of foodgrains to ensure National Food Security

In its 50 years of service to the nation, FCI has played a significant role in India's success in transforming the crisis management oriented food security into a stable security system. FCI's Objectives are:

- To provide farmers remunerative prices
- To make food grains available at reasonable prices, particularly to vulnerable section of the society
- To maintain buffer stocks as measure of Food Security
- To intervene in market for price stabilization

Organisational Structure

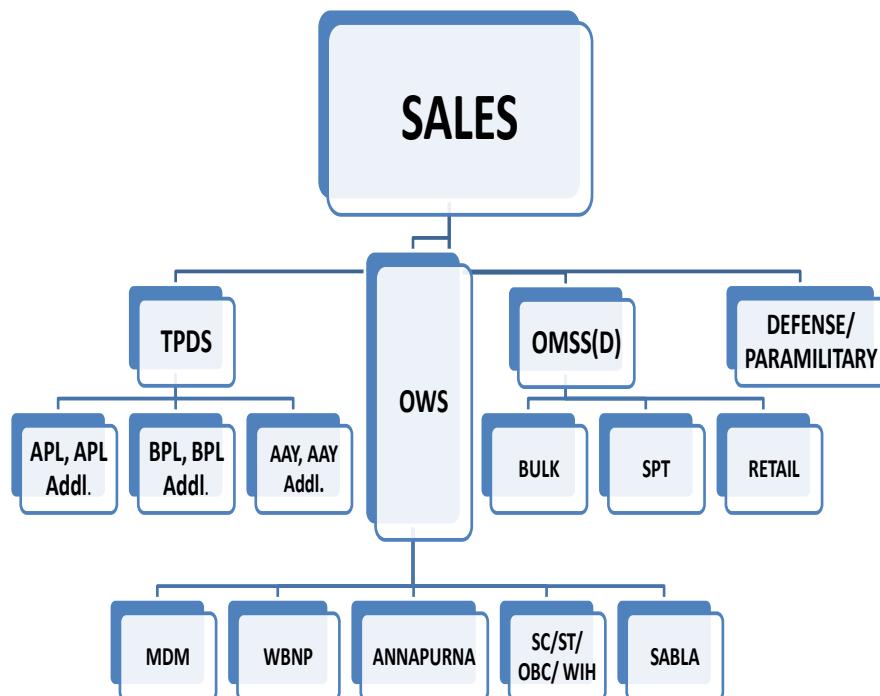

Operations of FCI

Good Food, Good Life

SCHEMES UNDER OMSS(D)

- **Salient features of OMSS(D):Bulk Sale**

- Prices decided by HLC (High Level Committee)
- RESERVE PRICE : MSP+ Incidentals+ Freight Charges (Ex-Ludhiana to Respective Deposits in State/UT Capital including Road Freight and Rail Freight Charges)
- Scheme monitored by Inter-Ministerial Group (IMG) & HLC headed by C& MD (Chairman and Managing Director)
- State-wise Allocation made by Ministry
- Purpose :
 - To decrease Inflation
 - To release excess buffer stock
- Participated by Bulk buyers : ROLLER FLOUR MILLERS/ TRADERS
- 2 bid process : TECHNICAL & FINANCIAL
- TECHNICAL BID : Empanelment
 - Requirements : VAT/Trade Tax Registration, Audited Balance Sheet, PAN Card, Undertaking
 - Finalized by Regional Level Committee under the Chairmanship of GM(Region)(applicable to Manual Tendering)
 - List of empanelled buyers (qualified) uploaded on FCI website
 - Continuous Process
- NIT published weekly, opened on 3rd day (Monday Floated ; Thursday Opened)
- Depot-wise Allocation by GM(Region)
- Inter-State participation allowed
- Min Qty : 100 MT ; Max Qty : 3500 MT
- Cost deposition : 7 days
- Lifting period : 14 (normal) + 14 (storage charges) days
- Both WHEAT and RAW RICE GRADE-A Sold

- **OMSS(D) : SMALL PVT. TRADERS**

Key features:

- Depot-wise Allocation
- Any trader : Voter I Card / PAN / VAT (if applicable)
- 3MT to 15MT per day per trader
- Sold at Reserve Price
- No tendering
- First come – First Serve basis till depot-wise quantity exhausted monthly
- Only WHEAT

- **OMSS(D) : Sale to State/UT Govt. for RETAIL distribution**

Key features:

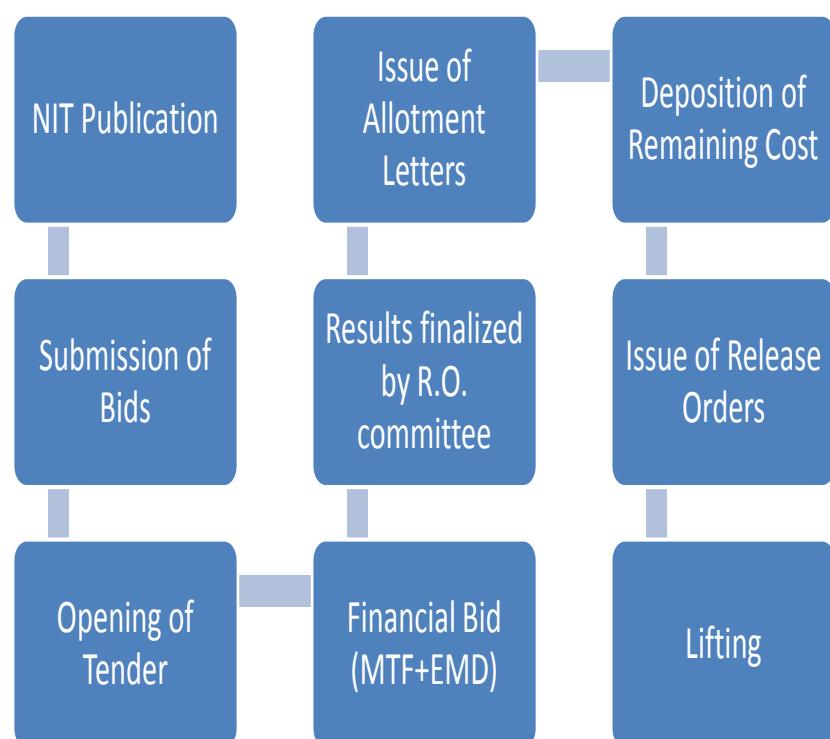

- Issued to State Govt./ State Govt. nominated Agencies
- Distributed to Retail Agents
- End Consumers : Public/ Hostels/ Schools/ Police/ Canteens/ Old Age Homes/ Jails
- Both Wheat (distributed as Wheat/Atta) & Rice
- Sold @ RESERVE PRICE ; No Tendering

The process of Bidding in Sale of Wheat and Raw Rice Grade-A by Bulk Consumers/tenderers was initially carried out in Food Corporation of India manually but later on upgraded to E-Auction or Online Bidding.

A brief description of both the processes is presented below.

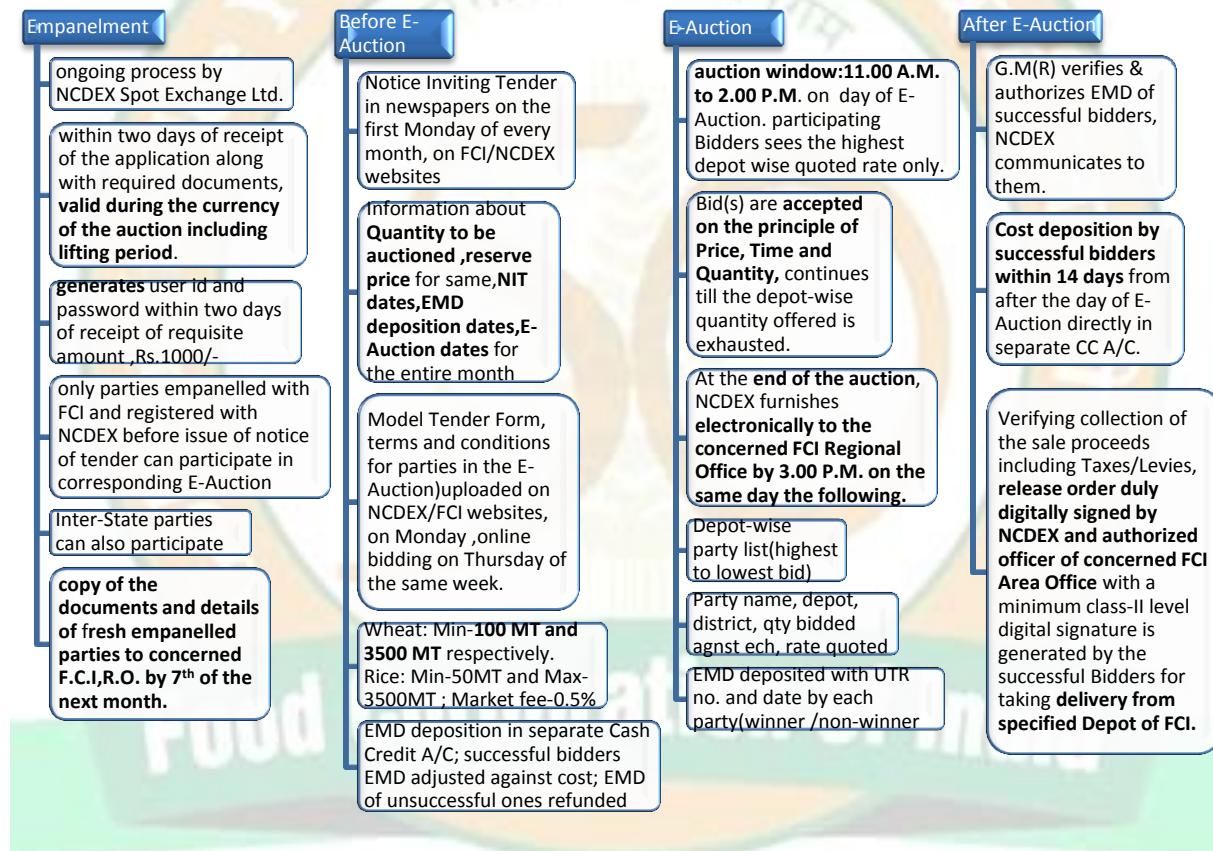

PROCESS OF MANUAL TENDERING

Since January'2015, E-Auction process- a service provided by a third party vendor, NCDEX Spot Exchange/e-Markets Ltd. has automated the manual process which has replaced certain portions of manual tendering like 'Submission of Bids', 'Opening of Tender', 'Issue of Allotment Letter', 'Results finalized by R.O. committee', Financial Bid(MTF + EMD) online .FCI personnel have longer to take care of these things as they are handled by NCDEX staff in return of a service fee. The entire process is explained below.

■ Process of E-AUCTION in FCI:

- A B-2-B process (FCI dealing in business with the Flour Millers)
- Commodity Auctioned : Wheat as well as Raw Rice Grade-A
- Food Corporation of India represents the Seller side
- Flour Millers/ Bulk Consumers represents the Buyer side
 - Wheat and Raw Rice Grade-A are sold through the process of E-Auction to the empanelled bulk consumers /traders.
- Service Provider : NCDEX Spot Exchange/e-Markets Limited
(is the third stake holder in the process who has entered into a contract with FCI for developing the system and carrying out the process of E-Auction , initially for a year and would be renewed as and when required if desired by FCI.
NCDEX Spot Exchange/e-Markets Limited charges a minimum service fee @2% of the total quantity sold per month plus 1% for other taxes)

7.Prevalent Manual Processes in the OMSS(D) Bulk operations of FCI

As is evident from above, both the manual tendering as well as E- Auction processes have some common operations which is still being carried out manually by the FCI personnel in various offices of the organisation and has been so since inception of the scheme named OMSS(D) Bulk in Food Corporation of India.

The manual tasks involved before and after E-Auction are explained through flow-charts below.

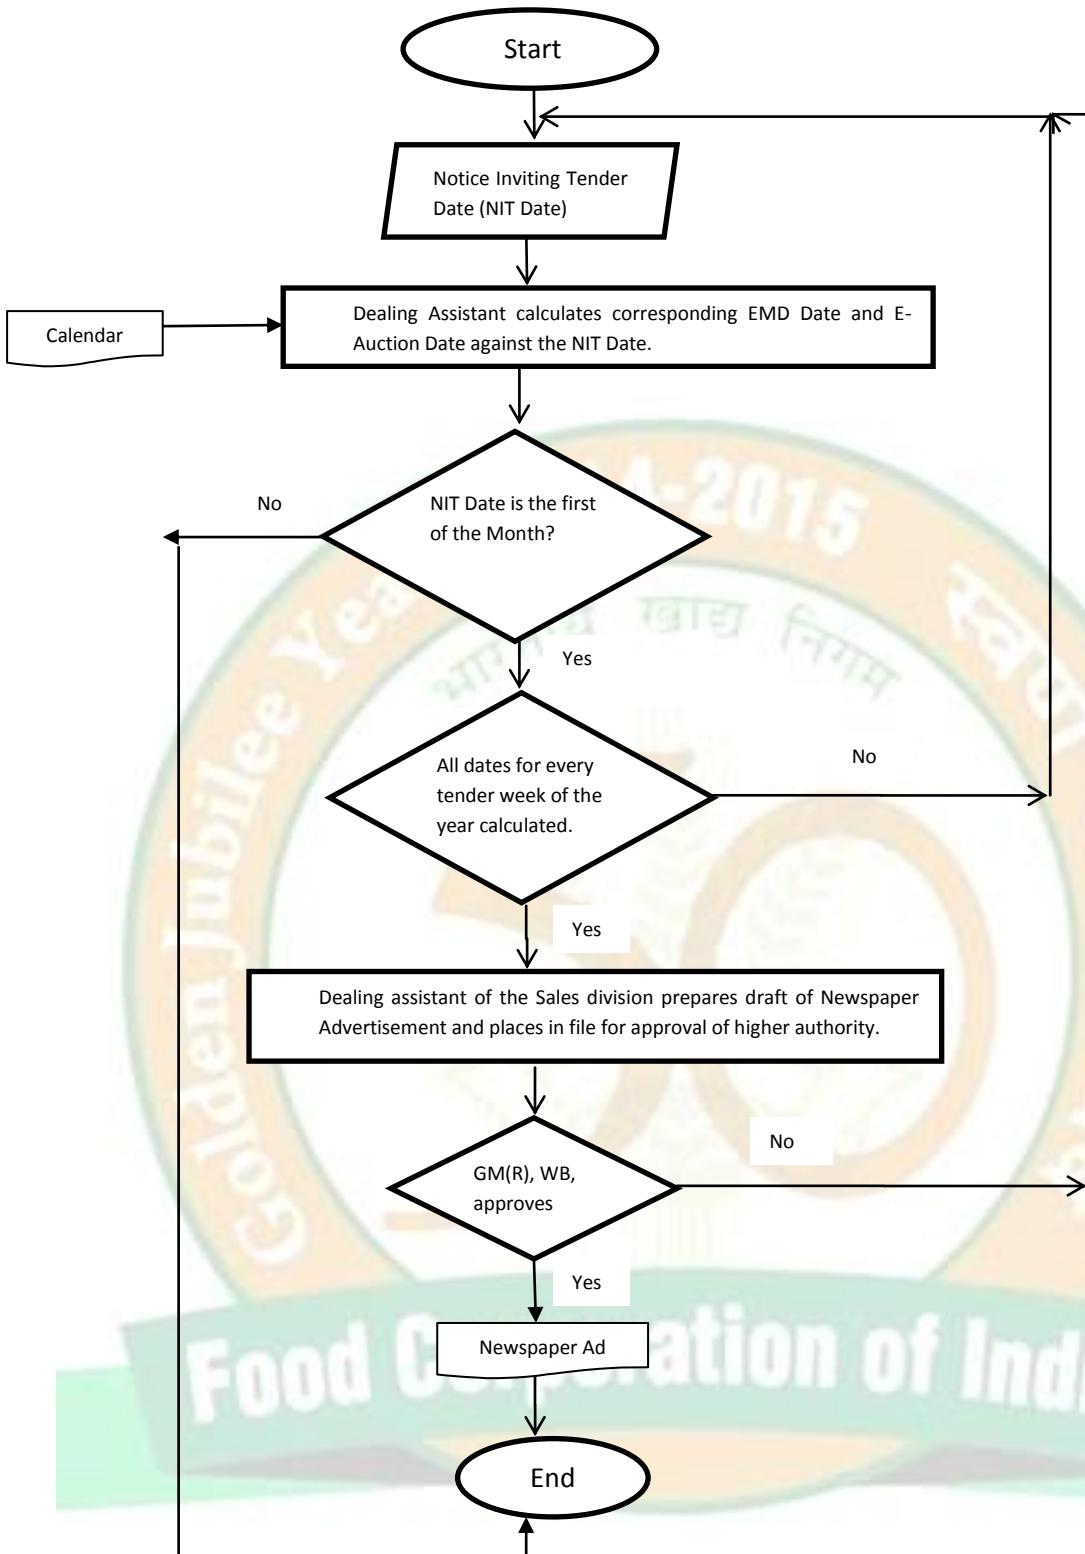

➤ Publication

- General Manager, GMs (Region) gives **wide publicity** to the scheme by giving **advertisement** and **press releases** in **one National daily and one Regional daily** having wide circulation in the respective State/UT besides hosting the same on FCI website(fciweb.nic.in), Service Providers website(ncdexspot.com)and on www.tenders.gov.in, every first Monday of a particular month (unless gazetted holiday falls on this day) informing the prospective buyers about :

The schedule of tenders of Open Sale of Wheat as well as Raw Rice Grade-A indicating the **Dates** -NIT(Notice Inviting Tender)Date i.e. Date for commencement of deposition of EMD by buyers/ parties/tenderers/bidders , EMD date i.e. Last Date for deposition of EMD by buyers/ parties/tenderers/bidders and E-auction Date i.e. Date of conducting **e-auction** in the entire month.

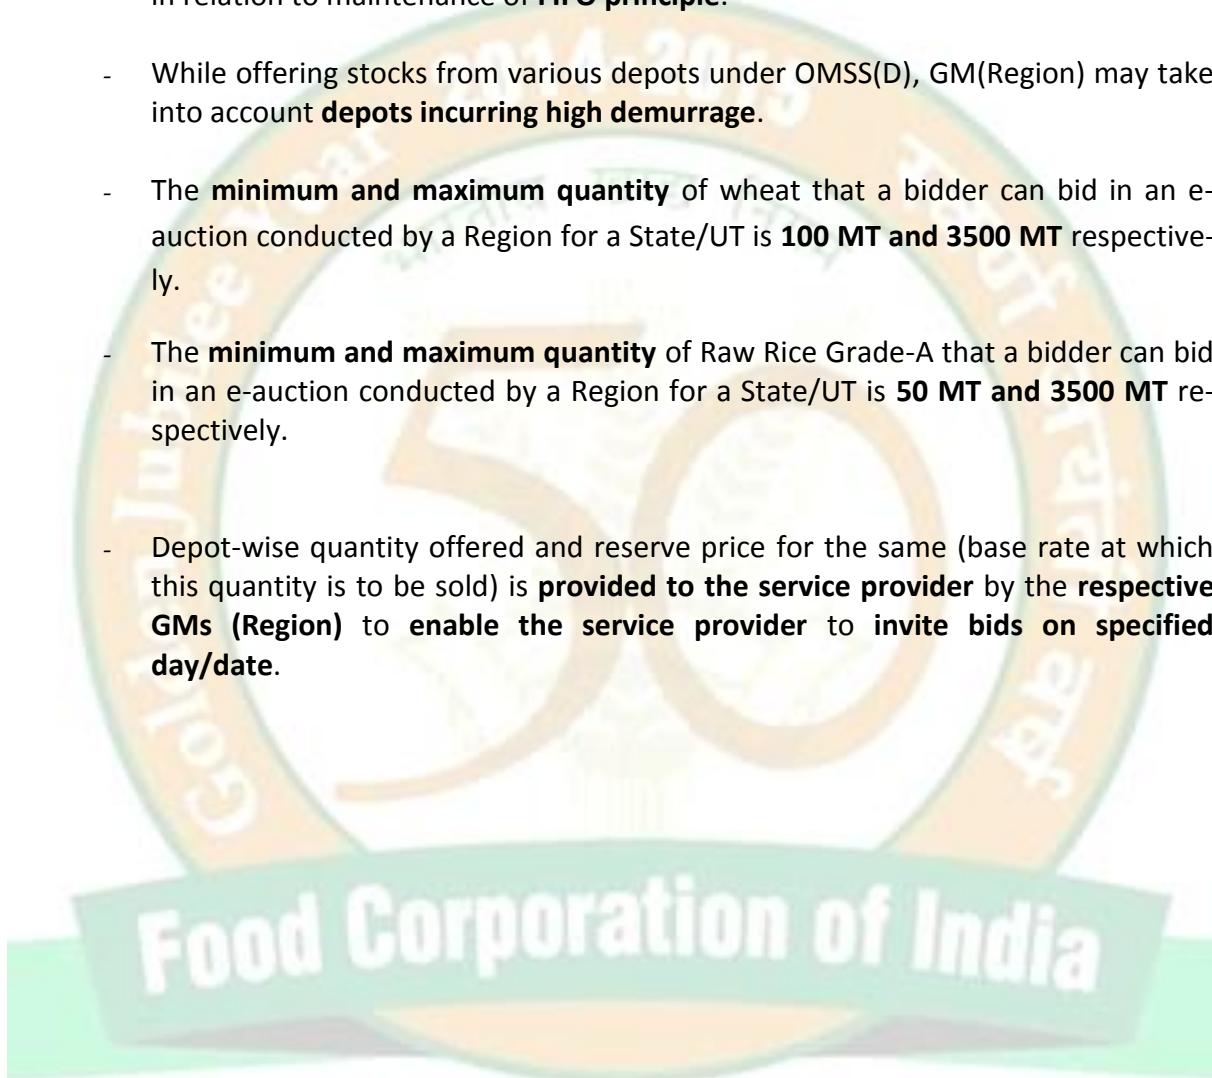

- If gazetted holiday falls on this Monday, the day is changed accordingly as per Hqrs instructions.

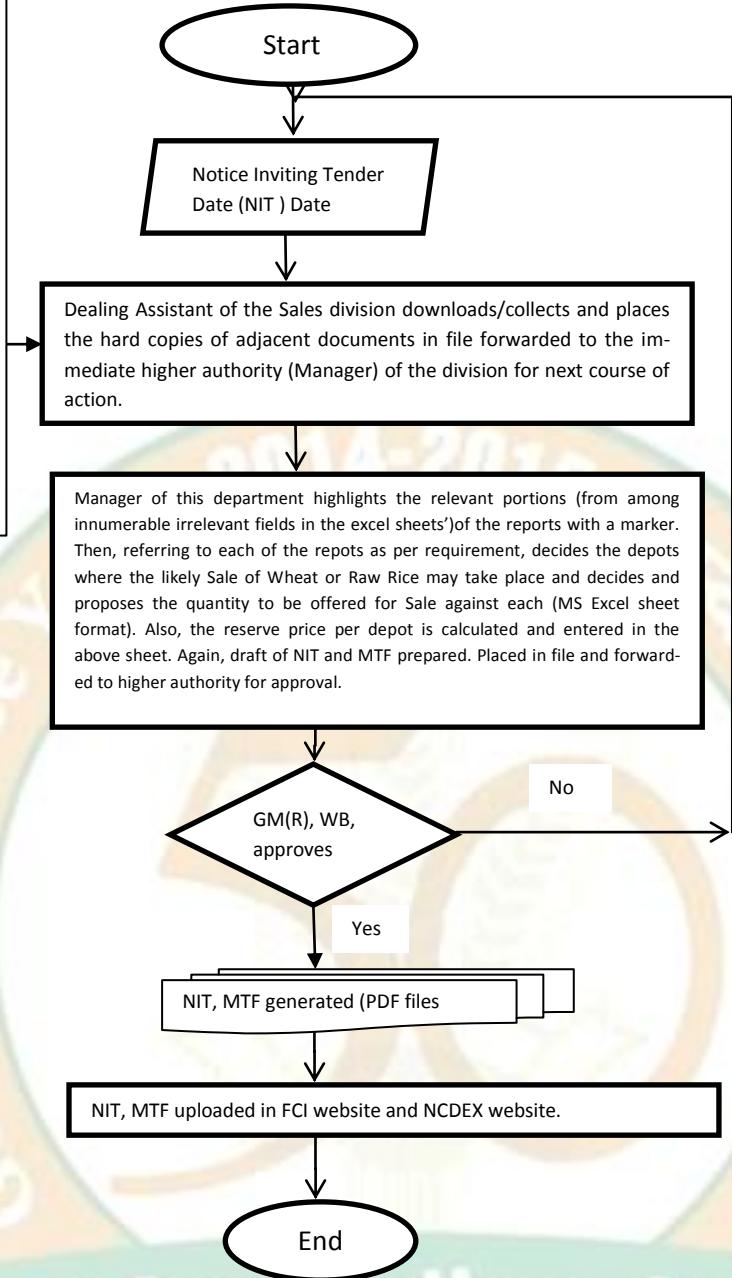

➤ Quantity offered for Sale

- Depot-wise bids are invited by R.O, FCI.
- While selecting the depots for offering wheat under e-auction, GMs(Region) follows the instructions contained in ***Quality Control Division Circular No. 01 of 2014 dated 13.03.2014*** and other instructions in vogue issued from time to time in relation to maintenance of **FIFO principle**.
- While offering stocks from various depots under OMSS(D), GM(Region) may take into account **depots incurring high demurrage**.
- The **minimum and maximum quantity** of wheat that a bidder can bid in an e-auction conducted by a Region for a State/UT is **100 MT and 3500 MT** respectively.
- The **minimum and maximum quantity** of Raw Rice Grade-A that a bidder can bid in an e-auction conducted by a Region for a State/UT is **50 MT and 3500 MT** respectively.
- Depot-wise quantity offered and reserve price for the same (base rate at which this quantity is to be sold) is **provided to the service provider** by the **respective GMs (Region)** to **enable the service provider to invite bids on specified day/date**.

Reports:

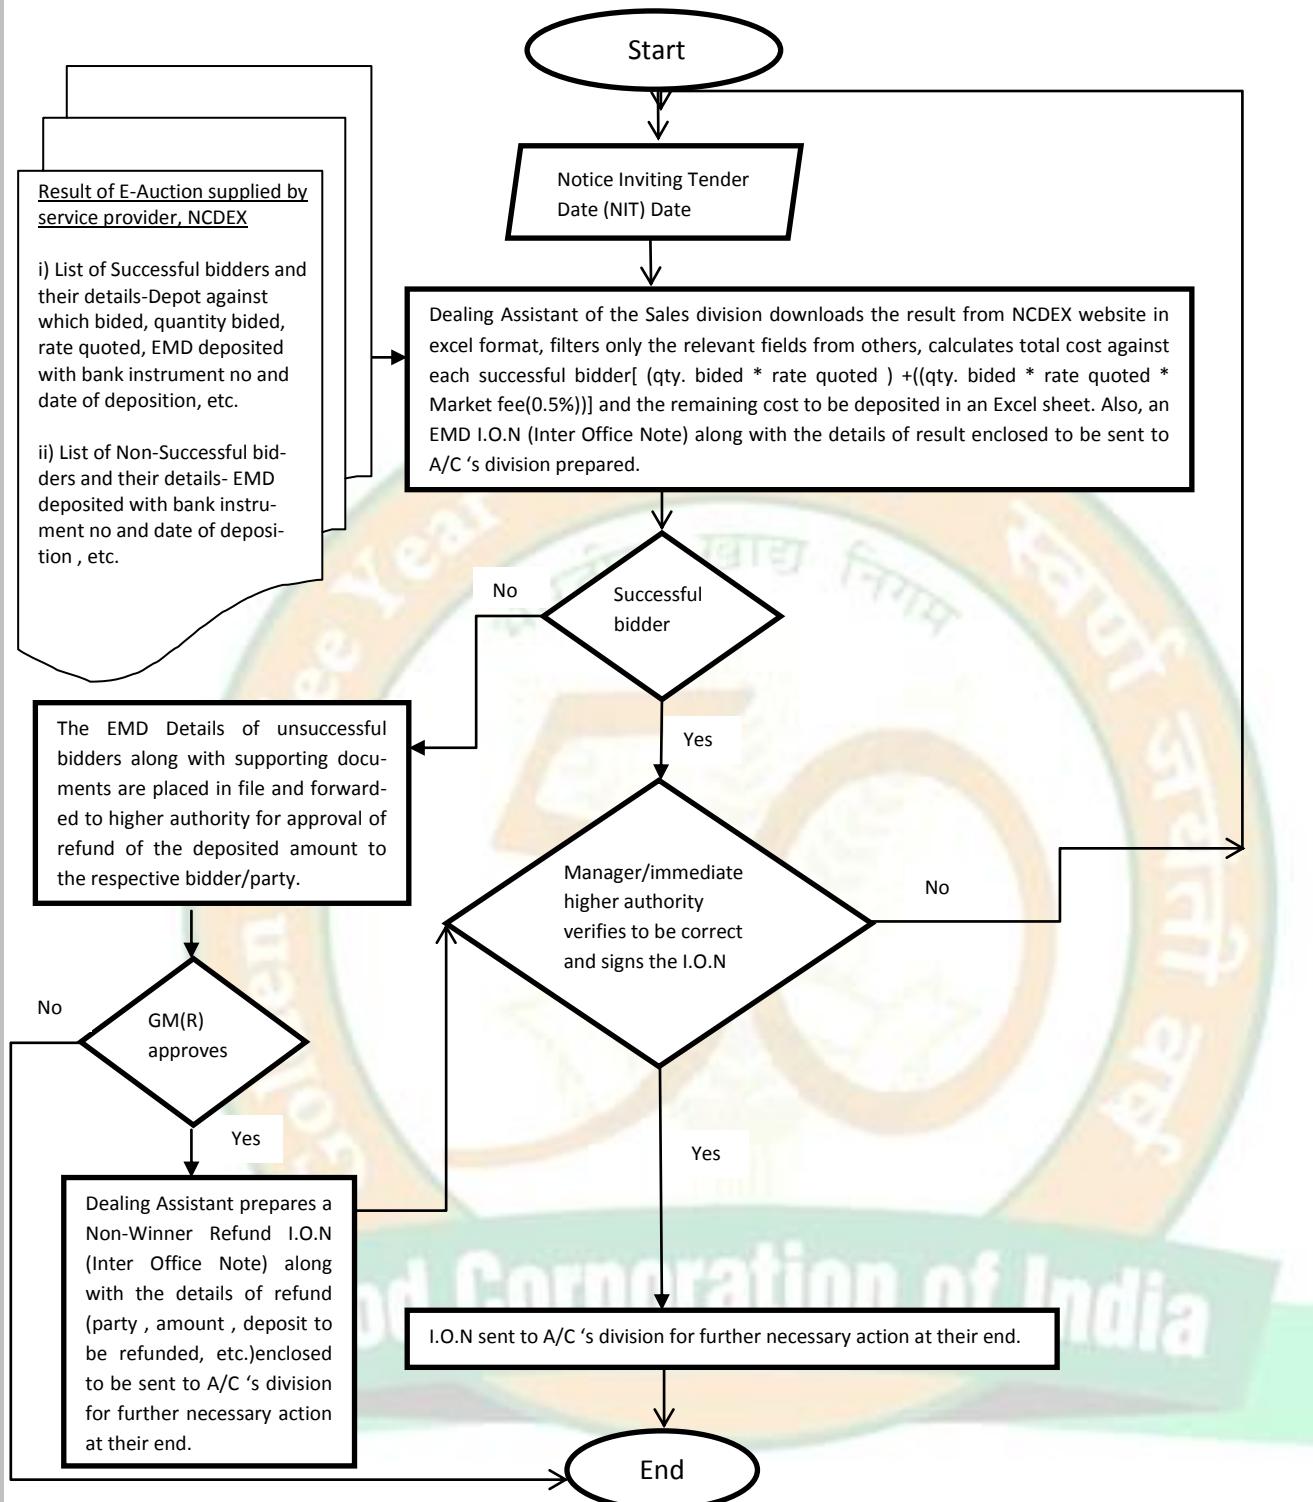

- i) Wheat Rakes planned for each depot supplied by Movement division
- ii) Depot-wise Total Wheat Stock available, downloaded from www.egrains.nic.in
- iii) Depot-wise Total Wheat Stock available, downloaded from www.egrains.nic.in
- iv) Depot-wise Wheat_URS Stock available, downloaded from www.egrains.nic.in
- v) Depot-wise Wheat(Only) Stock available, downloaded from www.egrains.nic.in
- vi) Email from Siliguri for Raw Rice position
- vii)Freights/Charges (Rail/Road), supplied by Contract Division

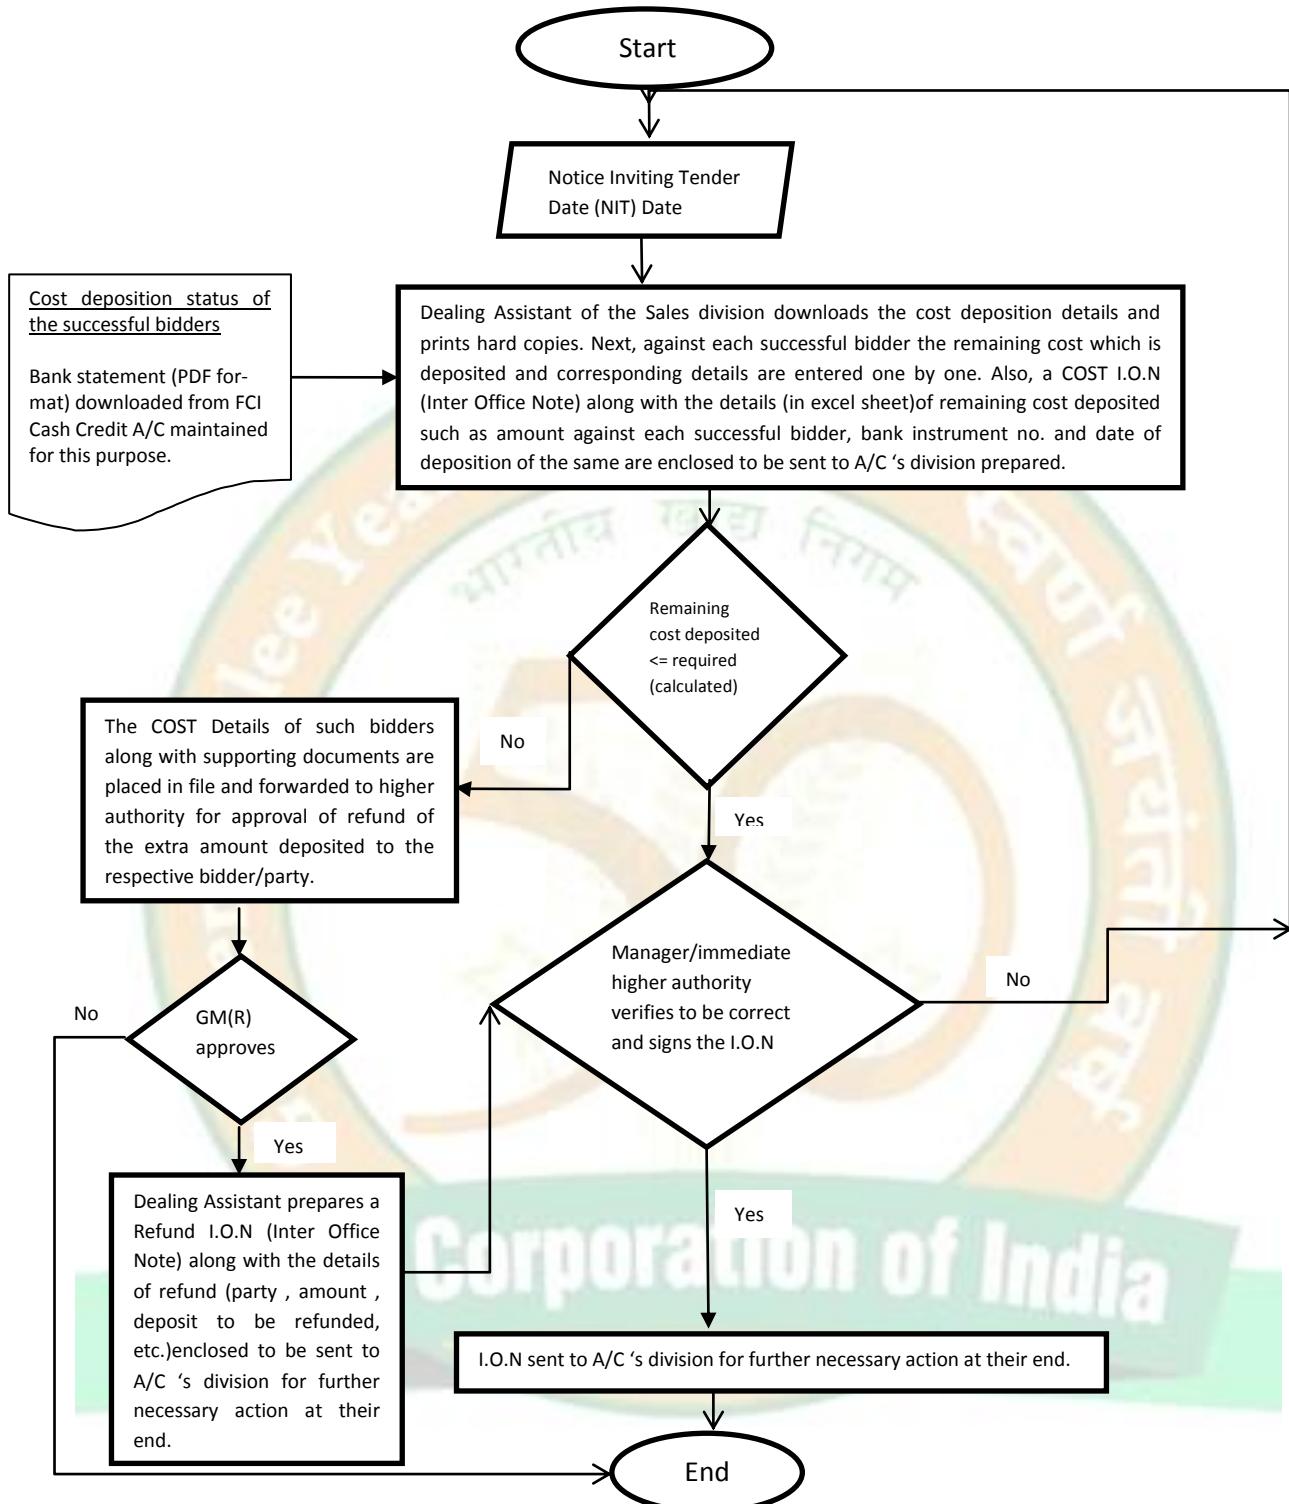

➤ EMD and COST Deposition

- GM (Region) FCI operates the **separate Cash Credit account for the purpose of e-auction of wheat and provides view right to the service provider**. The **Earnest Money Deposit (EMD)**, as applicable shall be deposited by the bidders in the said separate Cash Credit Account on or before the last of deposition which is one day prior to the date of E-Auction (usually if no gazetted holiday falls on that day).
- At the **end of the auction**, the Service Provider furnishes the following details electronically to the concerned FCI Regional Office by 3.00 P.M. on the same day:
 - **Depot-wise list of successful bidders along with details of the bid.**
 - **Quantity indented and quantity accepted**
 - **Details of EMD** –amount of EMD deposited, UTR no. of bank transfer of funds, date of deposition of EMD.
 - (iv)List of **unsuccessful bidder** along with the **details of the EMD deposited by them.**
- The **EMD of unsuccessful Bidders is refunded by FCI** on the advice of the Service Provider within three working days through NEFT/RTGS from the date of finalization of auction. The **EMD of successful bidders is adjusted against the cost of stocks.**
- GM (Region) immediately verifies the **receipt of EMD of the successful bidder in the system itself and only after authorization by GM(Region)**, the Service Provider communicates to the successful bidders electronically on the same day and asks them to deposit the balance cost of stock including taxes/levies, as applicable, directly into the **separate FCI Cash Credit Account.**
- The last date of deposition of cost by each successful bidder/party/tenderer is within seven days from after the date of E-Auction.
- For the purpose of deposition of cost of stocks/lifting of stocks, the day of communication of acceptance is not to be counted.

➤ EMD Deposition

➤ COST Deposition

8.Development of the Automated Application- OMSS(D) BULK

8.1 Technological Requirements

- Name of the application- OMSS(D)_ BULK
- Type of Application : Stand Alone
- Front end Interface Design and Coding Software : Visual Studio 2013 (Express Edition)
- Back end DataBase Software : MS Access 2010
- Programming Language : C#
- Minimum System Requirements:
 - Ram-1GB
 - Hard-Drive Memory -500GB
 - OS- Windows 7 and above with .Net Framework 4.5
 - Adobe Reader 8.0 and above
 - MS Office (Word and Excel suite only), 97-2003 and above.

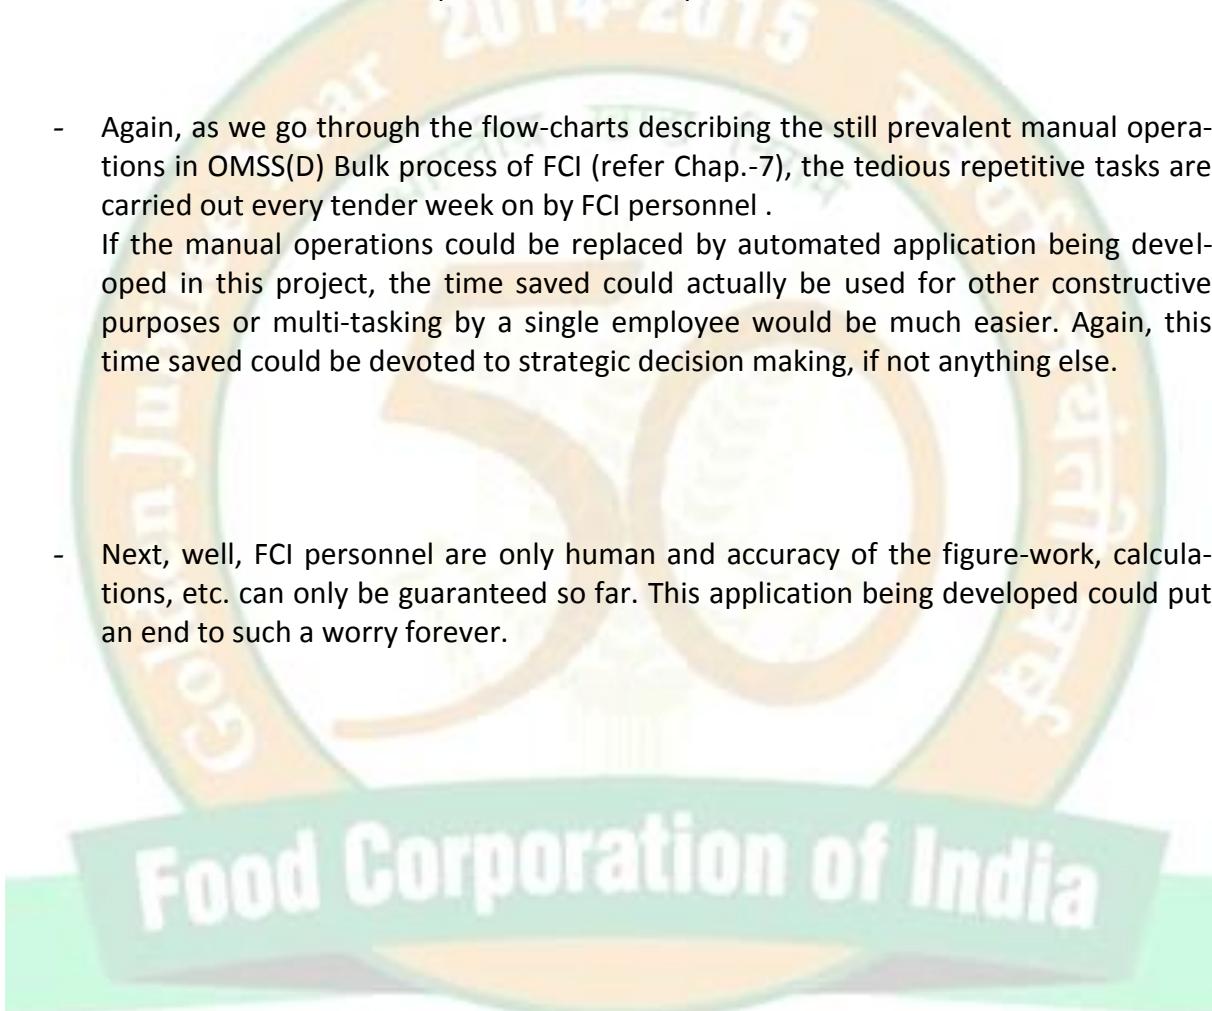

8.2 Need and Feasibility study

➤ *Need of developing the Automated Application: OMSS(D)_BULK*

- First and foremost, the very objective of Automation fails if we keep a process only semi-automated. If in spite of engaging a third party service provider with a considerable amount of fee to automate the bidding process through E-Auction, the other integral parts of OMSS(D)_BULK process still consume a lot of time and effort of FCI officials, then, there is no point of such an expenditure at all.

- Again, as we go through the flow-charts describing the still prevalent manual operations in OMSS(D) Bulk process of FCI (refer Chap.-7), the tedious repetitive tasks are carried out every tender week on by FCI personnel .
If the manual operations could be replaced by automated application being developed in this project, the time saved could actually be used for other constructive purposes or multi-tasking by a single employee would be much easier. Again, this time saved could be devoted to strategic decision making, if not anything else.

- Next, well, FCI personnel are only human and accuracy of the figure-work, calculations, etc. can only be guaranteed so far. This application being developed could put an end to such a worry forever.

➤ ***Feasibility of developing the Automated Application: OMSS(D)_BULK***

- Assessing *operational feasibility*, it has been found the proposed application is likely to solve the present problems faced during manual operations, save time and is also able to take advantage of the available opportunities and assist FCI personnel in an effective way.

Moreover, the new system would easily fit into the current operations of the organization.

- “*The smaller the team and the shorter the duration of the project, the greater the likelihood of success.*” (CHAOS Report 1999).

This application has been developed by a FCI employee within 45 days approximately (4-5 days of man hours applied per day). Single member team with minimum possible duration, hence, the likelihood of its success is quite high.

As the personnel herself does this job in FCI, she is well aware of the intricate details of the process and hence, is well experienced with its existing hassles. Hence, before developing the application, its requirements are naturally well structured and well defined. As such, it will have lower risk involved with it.

The project is less risky because the development and the user group are familiar with the technology used.

Therefore, the standard development tool (Visual Studio 2013, Express Edition is freely but legally downloaded from MS website by anyone who has an account, Windows 7 and above as OS with .Net framework 4.5, MS Access 2010 & Adobe Reader 8.0 and above are already provided in FCI offices) and hardware environments (PCs with Ram-1GB, Hard-disk Memory-500GB also already provided in every FCI office) are used.

Also, on the users' side, the user of the application herself is involved in its involvement; this involvement can lead to the success of the project.

Further, the interface is kept so simple and user-friendly, only one-time training would be enough for other users of the application to be familiar with the working of the application as well.

Thus, *technical feasibility* is ensured.

- No third party involvement implies no extra cost in the form of service fee or outsourcing fee.

Cost of development is almost nil since the technology used is already available either pre-installed in every PC of FCI offices or could easily be downloaded for free.

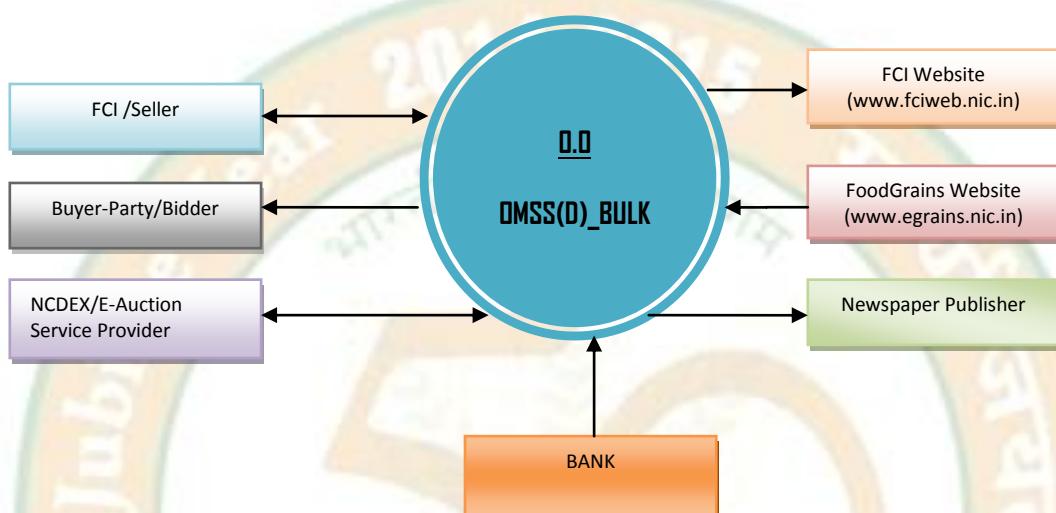

The criteria, rules, terms and conditions of Sale and various other bits change from time to time in FCI of which the FCI employee who is the user and developer would be instantly aware of. Hence, incorporation of these changes could easily be made.

Maintenance is hassle free, less complicated and also involves much less cost than otherwise.

Thus, this makes the new automated application being developed economically feasible.

Therefore, development and subsequent implementation of the automated application OMSS(D)_Bulk may be given a positive nod.

8.3 Data Flow Diagram (Context Level)

Meaning Of Symbols :

Bubble-Process: OMSS(D)_BULK

Rectangles -External Entities:

- i. FCI/Seller

8.4 DataBase Details

- The DataBase for the application is designed following RDBMS rules using MS Access 2010 software.
- DataBase is atleast in 1NormalForm(1NF).

Data Base structure

Structure of DataBase Tables

I. Structure of Table -'Publication'

- Stores details of the Newspaper Advertisement published once every month intimating the schedule of tenders for the entire month for Sale of Wheat as well as Raw Rice Grade-A.

Field Name	Field Data Type	Field Data Size/Format	Remarks
Month Name	Text	255 characters	Name of the month in which the Newspaper Advertisement is to be published.
Finyr	Text	255 characters	Financial year in which the month of publication falls.
PubDate	Text	255 characters	The date on which the newspaper advertisement is to be published.
NITDate	Date/Time	Long Date (eg.1 st January'2015)	The date of Notice Inviting Tender (Primary key of the table since a NIT Date is unique.)
EMDDate	Text	255 characters	The date of commencement of Earnest Money Deposition corresponding to the NIT Date (2 days after the NIT date)
EAuctionDate	Text	255 characters	The date of E-Auction (3 days after the corresponding NIT Date)

V. Structure of Table -'ApprovalQty_Rice'

- Stores the details of the quantity of Raw Rice Grade-A proposed to be sold from selected depots of FCI.

Field Name	Field Data Type	Field Data Size/Format	Remarks
ID	AutoNumber	Long Integer	Primary Key (Auto generated by Access).
NITDate	Date/Time	Long Date (eg.1 st January'2015)	The date of Notice Inviting Tender(Foreign key)
Depot_Selected	Text	255 characters	The name of the depot selected from where the likely Sale of Raw Rice Grade-A is to be con- ducted.
District_Selected	Text	255 characters	The name of the depot selected from where the likely Sale of Raw Rice Grade-A is to be con- ducted.
RRA_stock	Number	Double	The amount of Raw Rice Grade- A present in the godowns of the depot selected, available for sale in MT.
QtyProposed	Number	Double	The amount of Raw Rice Grade- A decided to be sold from the depot selected in MT.
Rate	Number	Double	The Rate (Rs./Qtl) at which the quantity is to be sold.

8.5 The Functional details-working of the Application 'OMSS(D) BULK'

(For complete design and programming codes, refer Annexure-I and II)

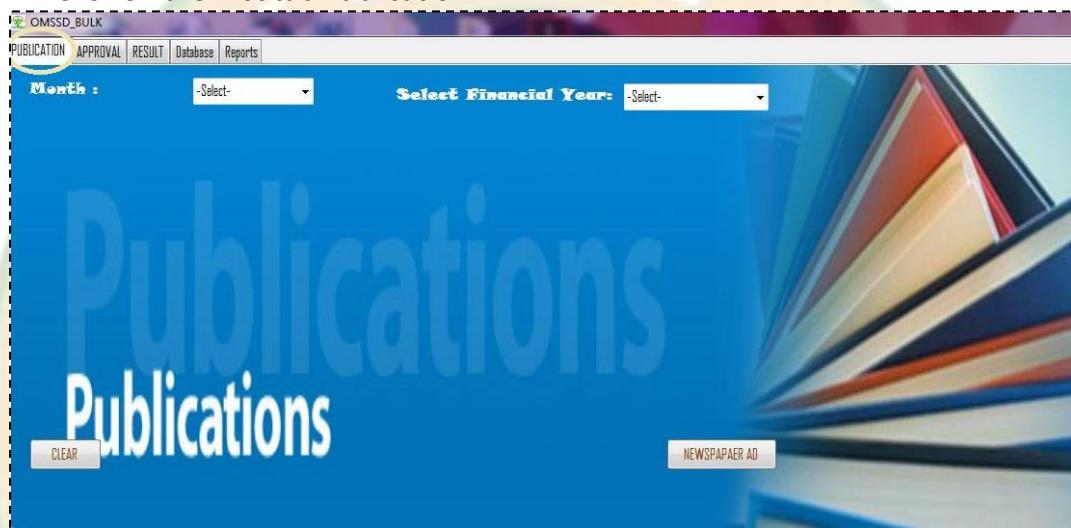

The working of application is explained through following Screen-Shots of its live run.

Module:1 Publication

A news-paper Advertisement intimating the schedule of tenders for Sale of Wheat as well as Raw-Rice(Grade-A) under OMSS(D) scheme from Food Corporation of India to the Empaneled Bulk Consumers of an entire month is published in each of English, Bengali and Hindi Daily every first Monday of each month.

■ Steps:

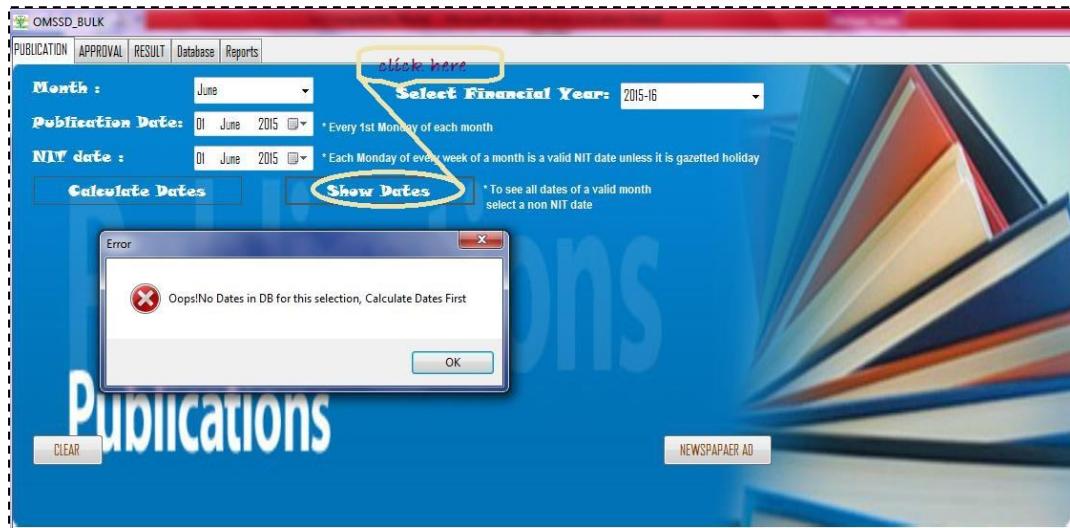

- Click on the first tab Publication.

- Select Month ,say June and Financial Year as 2015-16.
- Select Date of Publication Date(which is first Monday of each month))(say 1st June,2015) from corresponding Calendar.
- Select Date of Date of NIT(which is Monday of every week each month unless it is a gazetted holiday)(say 1st June,2015) from corresponding Calendar.
- The publication Date and First NIT date of each month invariably coincides unless gazetted holidays falls on those days.

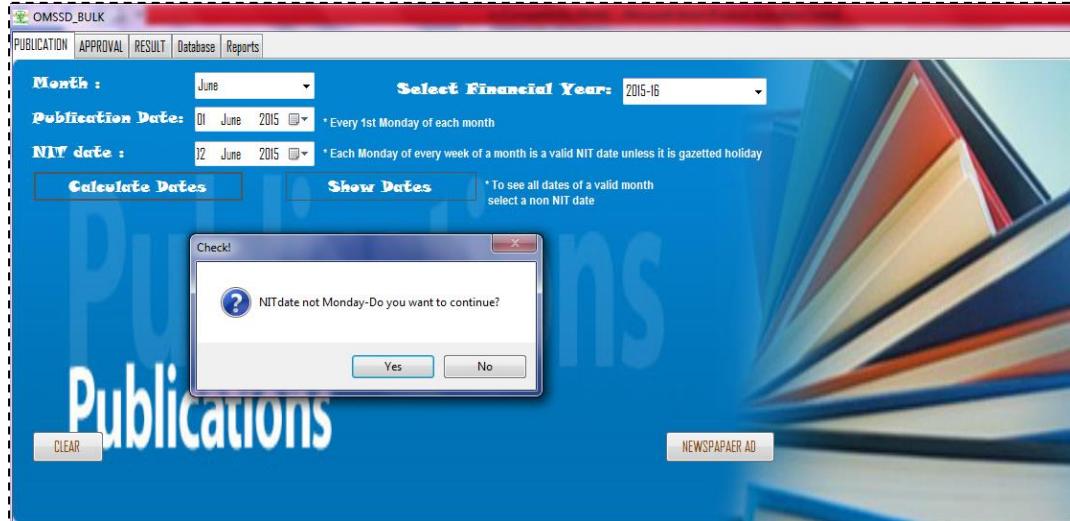

- Now, if we click on Show Dates – a pop-up appears informing us that no dates exist in database corresponding to the ones selected from calendar and, we need to enter the same by calculating dates first.

- Click on Calculate Dates instead.
- What happens is Date of commencement of deposition of EMD(Earnest Money Deposited) (which is after 2 days of NIT date) and Date of E-Auction(which is after 3 days of NIT date) corresponding to the selected NIT date gets automatically calculated and inserted in DataBase.

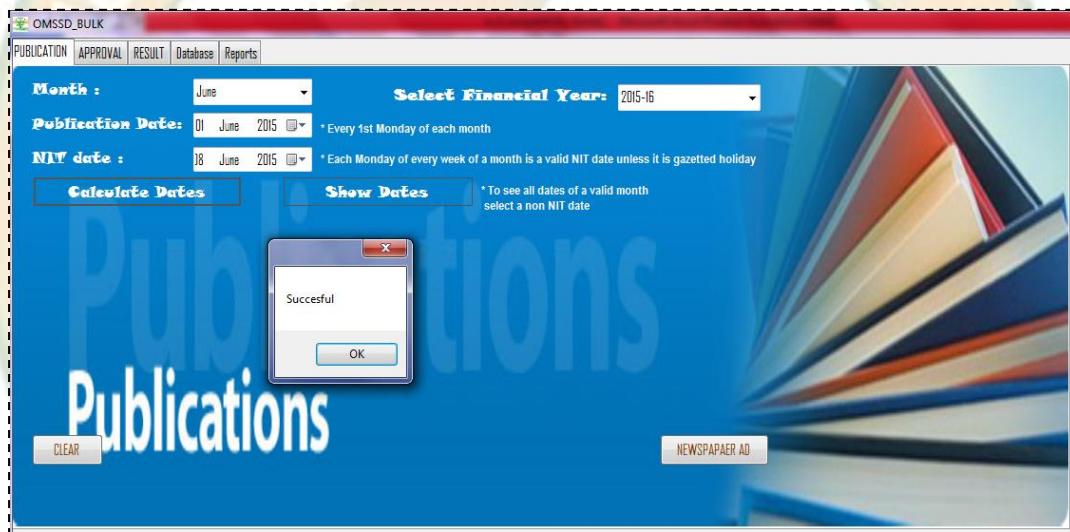

- On successful calculation and subsequent insertion, Successful message appears in the pop-up.
- If, however, a NIT date is not entered as a Monday, a pop-up appears asking whether the date is valid and the end-user wishes to continue. If yes is clicked, only then the entry continues, else we need to select a valid NIT date. This is a check to ensure accurate entry.

- The process is repeated for all NIT dates of the selected month (June) of Financial Year-2015-16.

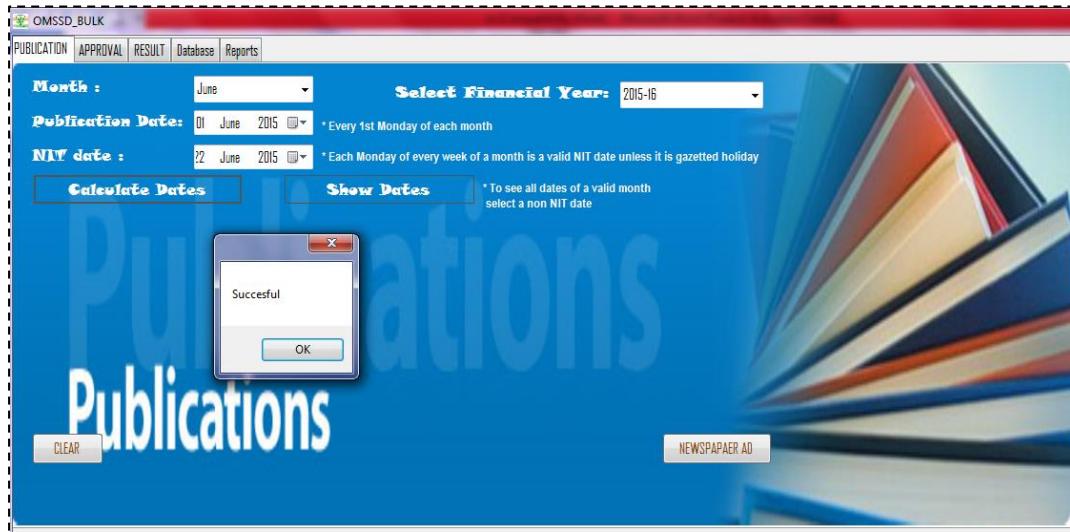

✓ NIT dated: 08.06.2015

✓ NIT dated: 15.06.2015

✓ NIT dated: 22.06.2015

✓ NIT dated: 29.06.2015

- To see the all the dates of the selected NIT date, click on Show dates now, the corresponding dates (EMD date, E-Auction date) are displayed.

The screenshot shows the OMSSD_BULK application interface. The top navigation bar includes links for PUBLICATION, APPROVAL, RESULT, Database, and Reports. The main form has dropdown menus for Month (set to June), Select Financial Year (set to 2015-16), Publication Date (set to 01 June 2015), and NIT date (set to 29 June 2015). Buttons for Calculate Dates and Show Dates are present. A table displays one record: Month (June), Finyr (2015), Publication Date (01-06-2015), NIT Date (01-06-2015), Last Date of Deposition of EMD (01-07-2015), Date of E-Auction (02-07-2015), EDIT, and DELETE buttons. A yellow callout box labeled "details of NIT Date selected" points to the NIT date field. Below the table, a message says "Total Records: 1" and there is a "NEWSPAPER AD" button.

Month	Finyr	Publication Date	NIT Date (Date of Commencement of Deposition of EMD)	Last Date of Deposition of EMD	Date of E-Auction	EDIT	DELETE
June	2015	01-06-2015	01-06-2015	01-07-2015	02-07-2015	[EDIT]	[DELETE]

- To see the all the dates of an entire month(here, June), click on an invalid NIT date of the month.

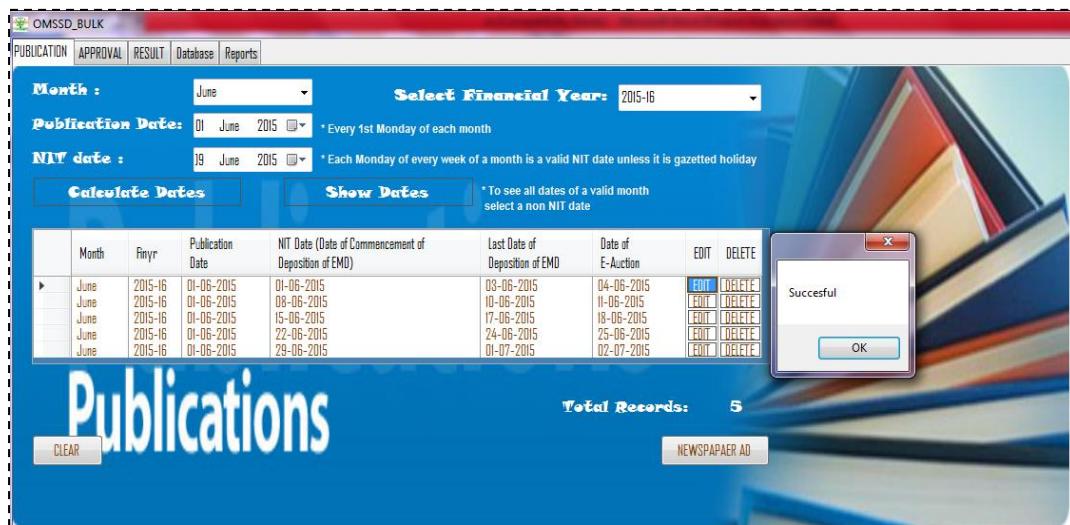

The screenshot shows the OMSSD_BULK application interface. The top navigation bar includes links for PUBLICATION, APPROVAL, RESULT, Database, and Reports. The main form has dropdown menus for Month (set to June), Select Financial Year (set to 2015-16), Publication Date (set to 01 June 2015), and NIT date (set to 19 June 2015). A modal dialog box titled "Error" appears, stating "Invalid date selected. Hence, all dates of selected month of the year displayed". Buttons for OK and CANCEL are visible. Below the dialog, a table displays five records for June 2015. A yellow callout box labeled "details of Error" points to the error dialog. Below the table, a message says "Total Records: 1" and there is a "NEWSPAPER AD" button.

The screenshot shows the OMSSD_BULK application interface. The top navigation bar includes links for PUBLICATION, APPROVAL, RESULT, Database, and Reports. The main form has dropdown menus for Month (set to June), Select Financial Year (set to 2015-16), Publication Date (set to 01 June 2015), and NIT date (set to 19 June 2015). A table displays five records for June 2015. A yellow callout box labeled "details of Month June" points to the table. Below the table, a message says "Total Records: 5" and there is a "NEWSPAPER AD" button.

Month	Finyr	Publication Date	NIT Date (Date of Commencement of Deposition of EMD)	Last Date of Deposition of EMD	Date of E-Auction	EDIT	DELETE
June	2015	01-06-2015	01-06-2015	01-07-2015	04-06-2015	[EDIT]	[DELETE]

June	2015	01-06-2015	22-06-2015	24-06-2015	25-06-2015	[EDIT]	[DELETE]
June	2015	01-06-2015	29-06-2015	01-07-2015	02-07-2015	[EDIT]	[DELETE]

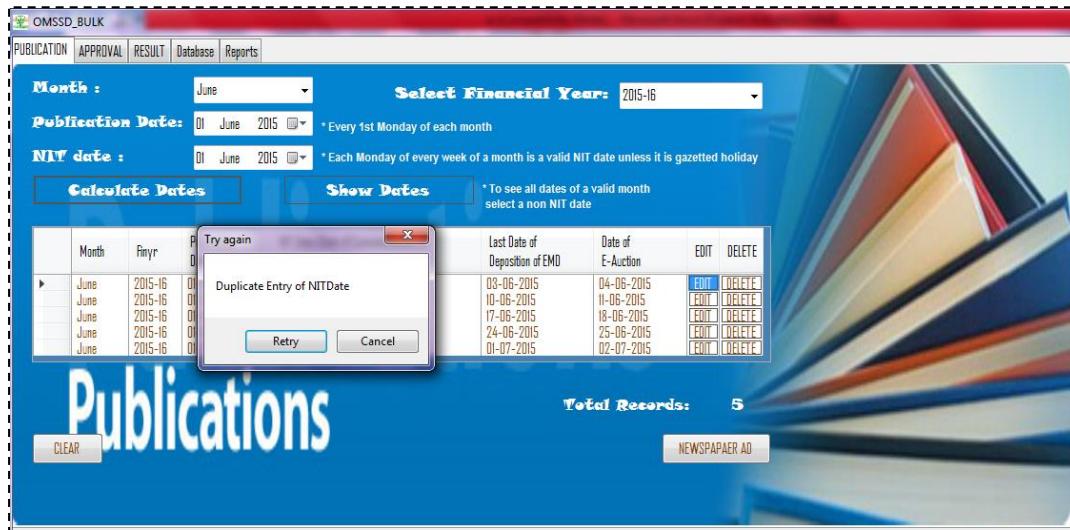

- The total no. of records for the particular selection is also displayed at the end of grid-view.
- There is also scope for editing or deleting the dates in the grid-view if there is a need for a change.

- Common flaws averted :
- What happens if one selects, inadvertently of course!, a NIT date or Publication date which does not fall in the same month or does not match with the month selected?
- The program is intelligent enough to detect such clumsiness of humans !

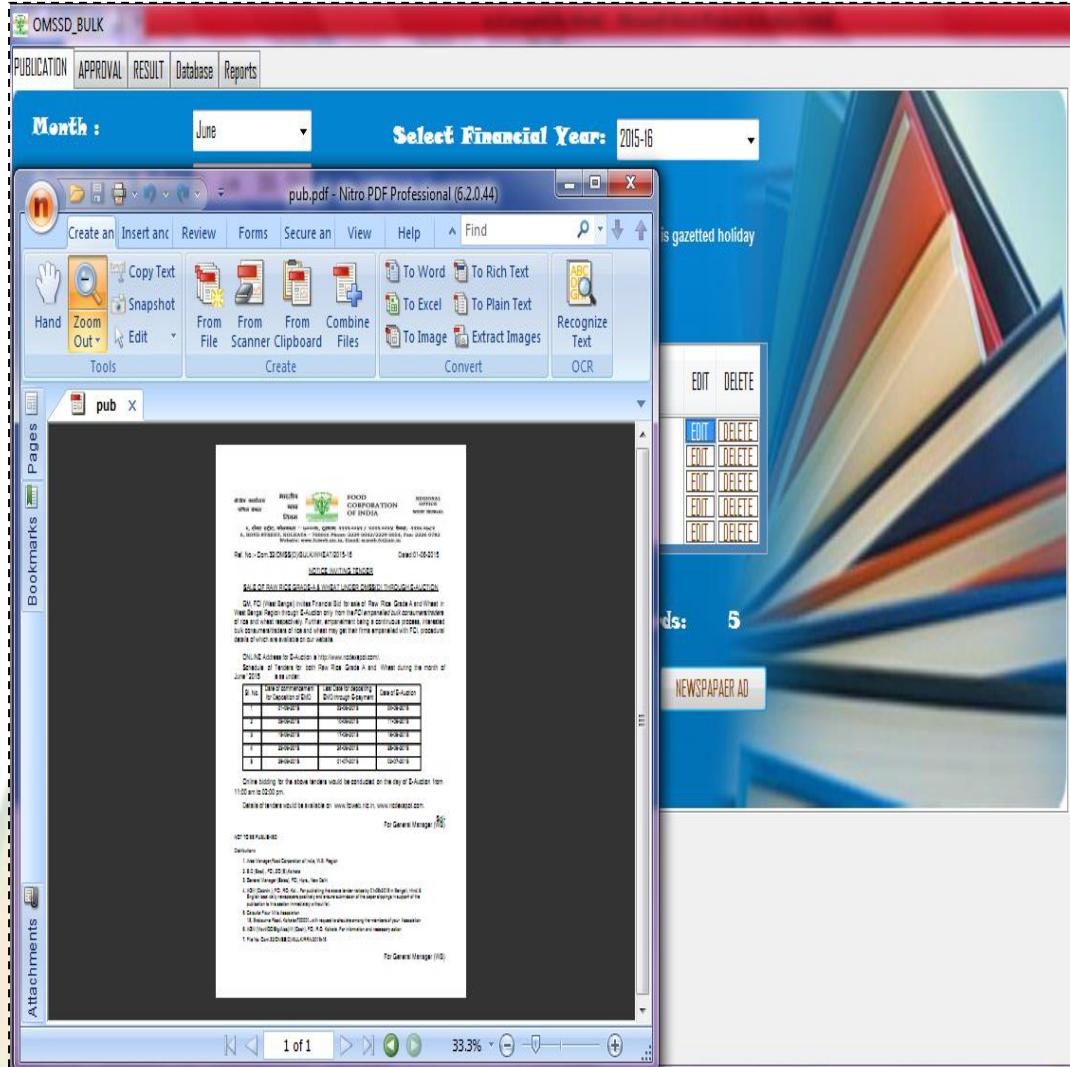

- What happens if one selects tries and calculates dates for NIT already done once?
- No worries! There is a check even for that. No duplicity is allowed.

- Now, click on Newspaper Ad, the advertisement in the required format gets auto generated in PDF format with no one necessitating to check whether the dates are calculated correctly or placed in the right position or the alignment is right and so on. The program does it for the end-user.

Ref. No.: Com.32/OMSS(D)/BULK/WHEAT 2015-16

Dated: 01-06-2015

NOTICE INVITING TENDER

SALE OF RAW RICE GRADE-A & WHEAT UNDER OMSS(D) THROUGH E-AUCTION

GM, FCI (West Bengal) invites Financial Bid for sale of Raw Rice Grade A and Wheat In West Bengal Region through E-Auction only from the FCI empanelled bulk consumers/traders of rice and wheat respectively. Further, empanelment being a continuous process, interested bulk consumers/traders of rice and wheat may get their firms empanelled with FCI, procedural details of which are available on our website.

ONLINE Address for E-Auction is <http://www.ncdexspot.com/>.

Timeline of Tenders for both Raw Rice Grade A and Wheat during the month of June '2015 is as follows:

Sl. No.	Date of commencement for Deposition of EMD	Last Date for depositing EMD through E-payment	Date of E-Auction
1	01-06-2015	03-06-2015	04-06-2015
2	08-06-2015	10-06-2015	11-06-2015
3	15-06-2015	17-06-2015	18-06-2015
4	22-06-2015	24-06-2015	25-06-2015
	29-06-2015	01-07-2015	02-07-2015

Online bidding i.e. the above tenders would be conducted on the day of E-Auction from 11:00 am to 02:00 pm.

Details of tenders would be available on www.fciweb.nic.in, www.ncdexspot.com.

Sd/-
For General Manager (WB)

NOT TO BE PUBLISHED

Distribution:-

- Area Manager, Food Corporation of India, W.B. Region
- E.D (East), FCI, ZO (E), Kolkata
- General Manager (Sales), FCI, Hqrs., New Delhi
- AGM (Coordin.), FCI, RO, Kolkata. For publishing the above tender notice (w/ 01-06-2015) in Bengali, Hindi & English local daily newspapers positively and ensure submission of the publication copy in support of the publication to this section immediately without fail.
- Calcutta Flour Mills Association
15, Brabourne Road, Kolkata-700011...with request to circulate among the members of your Association
- AGM (Movt/QD/Btg/Alcs)M (Cash), FCI, Kolkata. For information and necessary action
- File No. Com.32/OMSS(D)/BULKRR 2015-16

For General Manager (WB)

- The dynamic fields marked in circles like file no, date of publication, month name and year and the table containing the schedule for tenders for the selected month gets auto calculated and placed unlike the manual process where the end-user has to be particularly careful and alert so that none of these remain the same as old owing to copy and paste process. The rest of the body of the Ad repeats itself each time and unlike in manual process, need of copying and pasting is also eliminated.
- Similar process is repeated with all the months currently in Database.(i.e. from January '2015-March'2015 of the financial year 2014-15 as well as financial year 2015-16 till June'2015).

Module:2 Approval

This phase takes place before the uploading of tender in FCI website on Monday of each week. This is done usually on every Friday of preceding week. The quantity to be put to Sale for Wheat and Raw Rice Grade-A is proposed and placed in file for approval of higher authority. After approval, NIT (Notice Inviting Tender) is prepared containing vital information about the upcoming tender which is then uploaded in FCI website www.fciweb.nic.in for the interested Bulk Consumers to see and refer to before participating in the corresponding E-Auction on Thursday of each week.

➤ Three-fold process takes place in this module.

- 1st- *View Reports* : Here, all the reports, downloaded in excel formats from the food grains management website of Food Corporation of India, required to decide the quantity to be put Sale for Wheat as well as Raw Rice Grade-A in each NIT (Notice Inviting Tender) every week can viewed in a much compact user-friendly format.

5(five) kinds of reports viz.

- i) Depot-wise Wheat Rakes planned
 - ii) Depot-wise Total Wheat Stock
 - iii) Depot-wise Wheat URS
 - iv) Depot-wise Wheat (Only)
 - v) Depot-wise Rates
- are required for Wheat while only 2 kinds for Raw-Rice Grade-A viz.
- i) Email from Siliguri
 - ii) Depot-wise Total Raw-Rice Stock

The excel reports, otherwise, contain many fields not relevant to this purpose. However, this software program presents to the viewer only the necessary fields hiding the rest and thus, making the process much swifter.

- 2nd – Quantity proposed: The middle section operates parallel to the first. Now, with the reports opened on the left, one can simultaneously propose the quantity depot-wise to be put to Sale for Wheat or Raw Rice Grade-A in each NIT. There is also a facility provided to the end-user to view the quantity proposed in the previous NIT and edit the minimum required fields to enter the new quantity corresponding to the current NIT.
- 3rd – *Notesheet Creation* : The dealing assistant puts up a file by enclosing the reports mentioning their dates to the immediate higher authority(Manager) who then, places the proposed quantity in file for approval of the highest authority of WB region(General Manager(R)/Deputy General Manager(R)).

1st - View Reports:

- Select a NIT Date, say 01.06.2015.
(here, all the available valid NIT dates for the past and current months are already present for the user to select the relevant one.)

The screenshot shows the 'OMSSD_BULK' software interface. In the top navigation bar, the 'APPROVAL' tab is active. Below it, there are tabs for 'PUBLICATION', 'RESULT', 'Database', and 'Reports'. A dropdown menu for 'Select NIT date' has '01-06-2015' selected. Another dropdown for 'View Reports' is also visible. The main area is titled 'Select Commodity' with a dropdown showing 'Select-' and 'Wheat'. Below this is a section for 'Quantity proposed' with a dropdown for 'Previous NIT date' set to '18 July 2015'. There are two buttons: 'Show Qty. proposed in last tender' and 'Show Qty. proposed in current tender'. On the right side of the screen, there is a watermark-like graphic of the Indian flag with the text 'FOR APPROVAL' diagonally across it and the slogan 'ENSURING FOOD SECURITY OF NATION'.

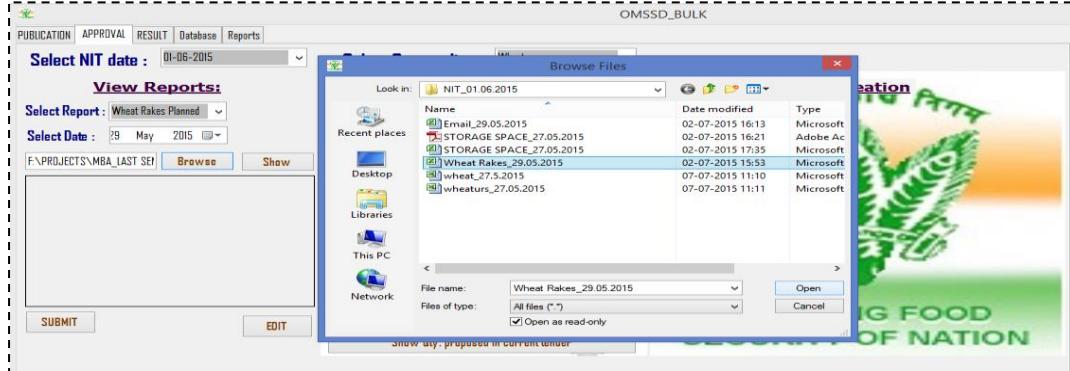

- Next, select commodity either Wheat or Raw-Rice Grade-A.
(The same process repeats for both.)
- First, Wheat is selected.

This screenshot shows the same software interface as the previous one, but with the 'Select Commodity' dropdown now showing 'Wheat' instead of 'Select-'. The rest of the interface remains the same, including the 'Quantity proposed' section and the watermark logo.

This screenshot shows the software interface after selecting 'Wheat'. The 'View Reports' section is now open, displaying a large empty box for reports. There are buttons for 'Select Report', 'Select Date', 'Browse', and 'Show'. At the bottom left are 'SUBMIT' and 'EDIT' buttons. The rest of the interface, including the 'Quantity proposed' section and the watermark logo, remains the same.

- We find that as soon as Wheat is selected, the *View Reports* section opens.

- Select a report (say, i) Report-Wheat Rakes Planned).
- Select its date (date of report as is found in the downloaded excel sheet, say, 29.05.2015).
- Click on Browse.
- A dialogue box opens asking the user to find the file from where it is saved and open it.

- Click on Show .

- Only the required fields like District name, Depot name and Wheat rakes planned corresponding to the Depot from amidst various other fields spread across the original Excel sheet report gets displayed on screen in the box provided.
- Click on Submit.
- The report name with its date gets successfully inserted to database corresponding to the NIT Date selected and Wheat commodity.

ii) Report - Total Raw Rice Stock

- Moving on to the *Quantity proposed* section.
- The quantity of Wheat or Raw Rice Grade-A to be put to Sale in E-Auction for the particular NIT Date Selected (here, 01.06.2015) is decided and proposed in the following 2(two) ways:

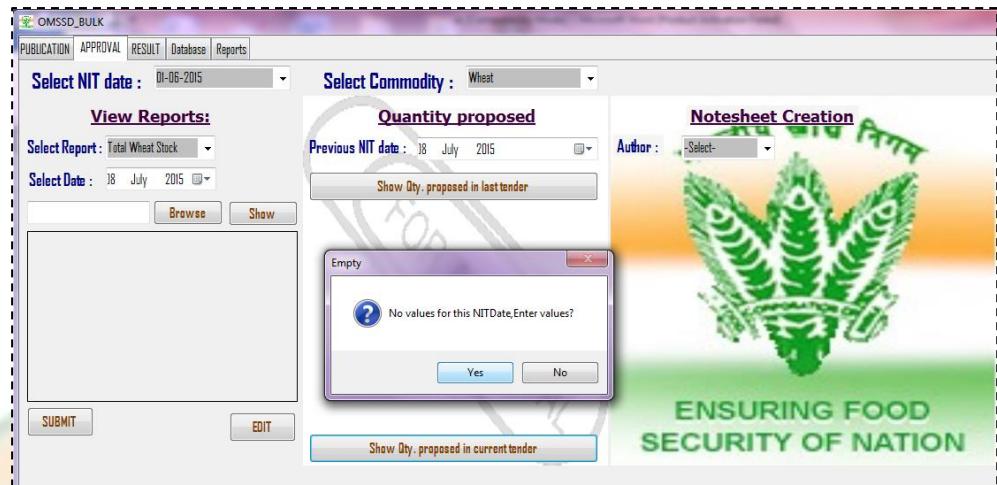

1st way:

- Select the NIT date immediately previous to the current NIT date i.e. 25.05.2015 in this case.
- Click on Show Quantity proposed in last tender
- The quantity proposed in last tender corresponding to each depot is displayed.
- Now, necessary changes can be made in the quantity and date columns and each row is added one by one corresponding to the current NIT date by clicking on ADD.
- We can also add new rows dynamically.
- But if no data exists for the previous NIT date selected i.e. here, for 25.05.2015 as is shown below, we move on to the 2nd way. This 1st way will be explained later with an example.

The screenshot shows the OMSSD_BULK application window. At the top, there are tabs: PUBLICATION, APPROVAL, RESULT (which is selected), Database, and Reports. Below the tabs, there are dropdown menus for 'Select NIT date' (set to 01-06-2015) and 'Select Commodity' (set to Wheat). A 'View Reports:' section includes a dropdown for 'Select Report' (set to RATES) and a 'Select Date' dropdown (set to 15 June 2015). To the right, there's a 'Quantity proposed' section with a table showing data for CSD Dibrugarh, Silguri, and IIS4 639 MT. A button labeled 'Show Qty. proposed in last tender' is highlighted with a blue border. A modal dialog box titled 'Error' is overlaid, displaying the message 'No values in DB for this NITDate' with an OK button. In the bottom right corner of the application window, there is a watermark featuring a green leaf and the text 'ENSURING FOOD SECURITY OF NATION'.

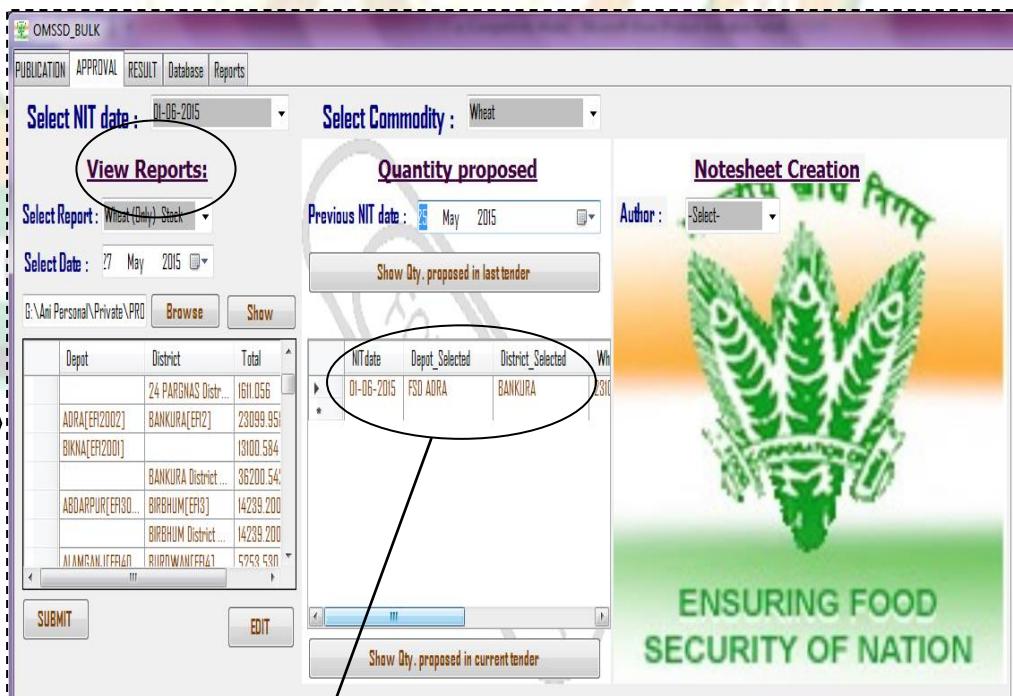

2nd way:

- Click on “Show Qty. proposed in current tender.”

- A dialogue box opens asking ‘No values for this NIT Date, Enter values?’
- Click on Yes if we wish to enter the proposed quantity for the current NIT Date selected as 01.06.2015.
- Immediately, the interface opens allowing the end-user to enter data.
- Another advantage over the manual process, the user can keep the report required opened on the screen in the leftmost pane and refer to it to help decide and enter the proposed quantity as is shown below.

Report Wheat(Only) Stock showing current stock present in the depots of F.CI. can be browsed and opened on the left of screen.

Depot FSD ADRA from District BANKURA is selected.

A small 'Successful' message box with 'OK' button is displayed.

5000 MT at the rate of 2300 per qtl. Is proposed to be sold in this NIT and click on ADD for successful insertion.

- The process is repeated for all NIT Dates from January '2015-March'2015 of the financial year 2014-15 as well as financial year 2015-16 till June'2015 for both commodities Wheat and Raw Rice Grade-A.

1st Way of entering proposed quantity for the current NIT Date:

- Select another NIT Date, say 15.06.15 and Commodity Wheat.
- Select Previous NIT date as 08.06.2015 and Click on 'Show Qty proposed in last tender'.

The quantity proposed in last tender is displayed in the mid of screen in the box provided. Now, we can edit the columns like Date column, Depot column, District column, quantity to be proposed as well as Wheat_URS stock column keeping the required reports opened in the left-hand pane so that consulting them, the decision becomes easier. Such facility is unavailable in manual process where the dealing personnel has to print the hard copies of all reports required each time and consult them one by one when required risking the chance of misplacing them or inaccurate entries owing to carelessness of human nature.

Succesful

ENSURING FOOD SECURITY OF NATION

- The 3rd section of module-2 (Approval) deals with *Notesheet Creation and NIT generation*
- Select a NIT Date , say 01.06.2015, the first NIT of the month of June'2015.
- Select Commodity Wheat.
- Then, under Notesheet Creation, select Author of the Notesheet (whether Dealing Assistant or Manager) say, Dealing Assistant is selected.

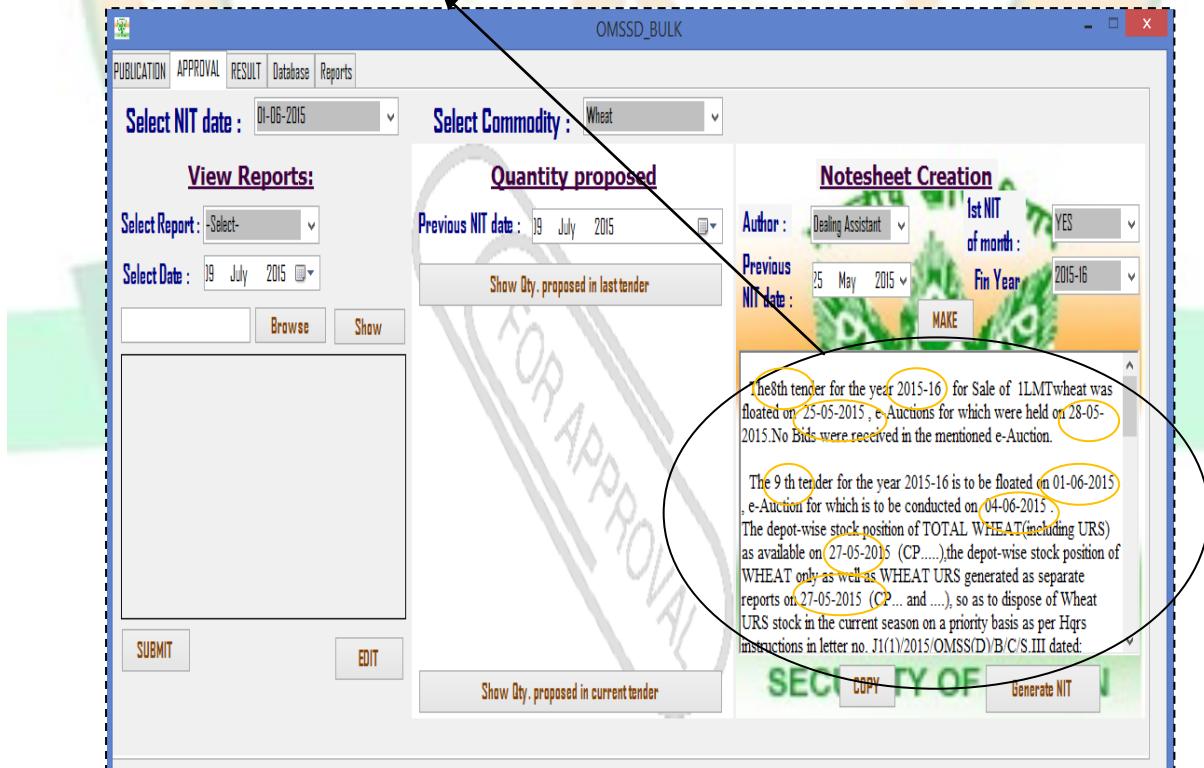

- That opens the option which asks for whether it is the first NIT of the month or not.
- Since, the NIT Date 01.06.2015 is selected which is indeed the first NIT of the month June'2015, so the option Yes is selected.

- Immediately, opens the option of selecting *Previous NIT Date* (which is chosen as 25.05.2015, quite obviously!) and the *financial year* to which the tender belongs is selected (2015-16 in this case).

- The Make button comes up on selecting the financial year.
- Click on Make and the *Notesheet* is formed.

प्रबंधक (वाणिज्य) COPY Generate NIT

- The Notesheet contains some parts which repeats themselves every NIT while others change. The variable portions marked in yellow circles like dates of reports, no of NIT, quantity put up in current tender and sold in previous tender all get placed in their right position automatically without the end-user even needing to think about them and with absolute precision each time without anyone having to do worry about them.

- One can edit portions of the Notesheet on the screen of the application itself, if required.
- Click on COPY, now. That selects the entire Notesheet and copies it to clipboard.
- Now, we can paste the entire material anywhere in a MS word/text file after wherever the cursor is. This feature is essential because as it happens in case of Notesheet placed in files in Govt. Offices, not all of them start at the same place or in the beginning. The next topic may start where the previous has topic ended which could be anywhere in the Notesheet.

- Now, same happens when Commodity is Raw Rice Grade-A.

The screenshot shows the "OMSSD_BULK" software interface. At the top, there are tabs: PUBLICATION, APPROVAL, RESULT, Database, and Reports. The "RESULT" tab is selected. In the center, there is a "Select Commodity : Raw Rice Grade A" dropdown. To the left, there is a "View Reports:" section with "Select Report" and "Select Date" dropdowns, and buttons for "Browse" and "Show". Below this is a "Quantity proposed" section with a "Show Qty. proposed in last tender" button. To the right, there is a "Notesheet Creation" dialog box, which is identical to the one shown in the previous screenshot for wheat. The notesheet contains text about the 8th tender for Raw Rice Grade A and the 9th tender for Raw Rice Grade A, both dated 01-06-2015. The text is identical to what was shown in the Microsoft Word document.

Module:3 Result

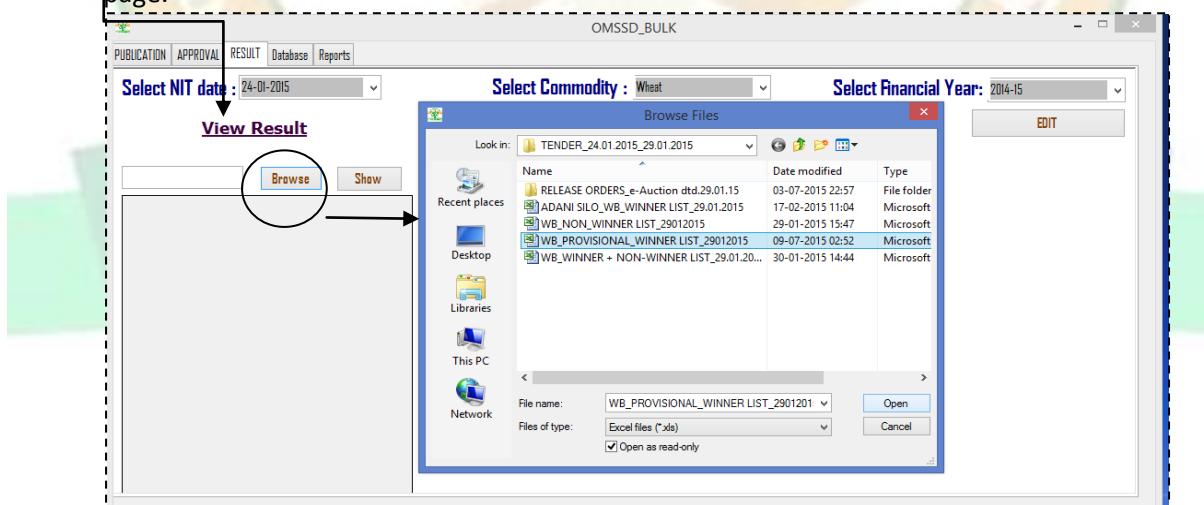

This phase begins after the E-Auction on each Thursday of every week against the NIT corresponding to the Monday of the same week unless gazetted holidays fall on these days. The quantity bidden by the winning tenderers/parties/Bulk Consumers through E-Auction against each depot is obtained in the form a Winning list in excel format as downloaded from NCDEX website(the E- Auction service provider for FCI).The winning list also contains information regarding the Earnest Money deposited by each party in the Cash Credit A/C of Food Corporation of India prior to the E-Auction day which is 10% of Total cost(= Qty Bid * Rate Quoted), date of deposition of each EMD and the Bank Instrument no. through which each is deposited.

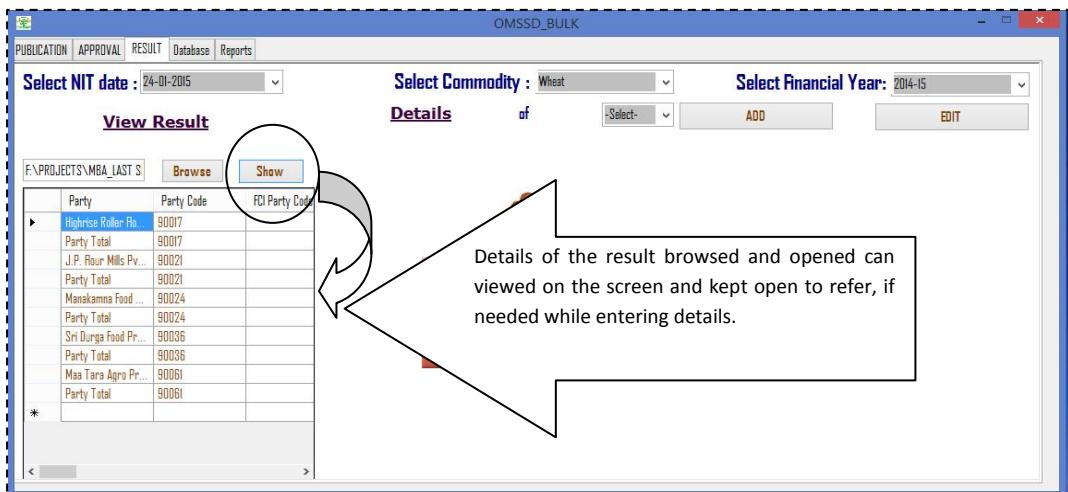

The non-winners list corresponding to the same NIT date, if any, containing the party's name and EMD details can also be downloaded from NCDEX website. The EMD deposited by the non-winners has to be refunded.

Hence, this data is sent in the form of an I.O.N to A/C division for necessary action at their end.

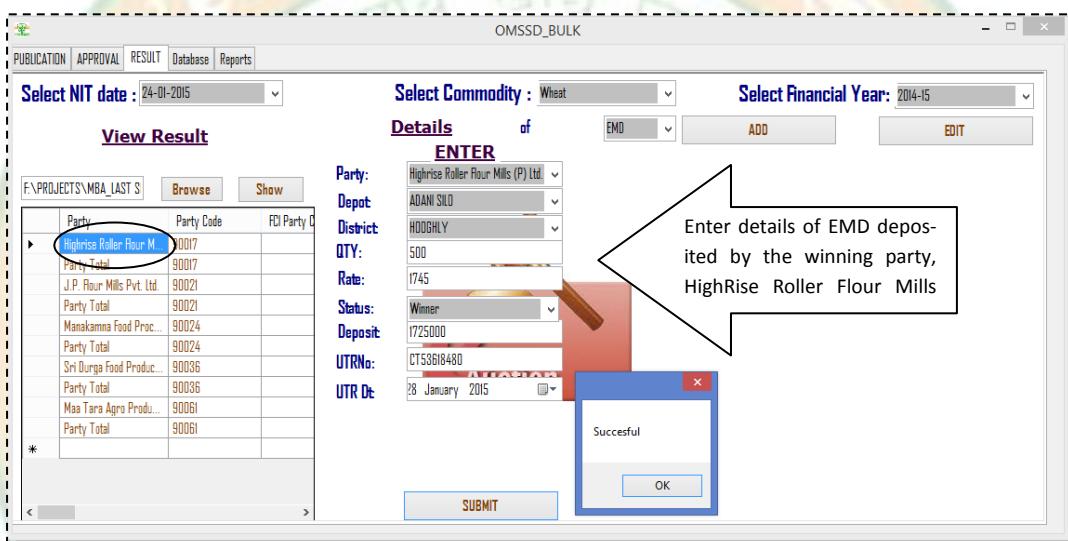

Also, up until seven days from the date of E-auction, the parties are allowed to submit the remaining cost (Total Cost –EMD) in the same CC A/C of FCI, the details of which (amount, party name, date of deposition and bank instrument no.) are obtained in excel format from the online banking portal of the said Bank A/C. This data in a consolidated format needs to be sent to A/C s division vide an I.O.N for necessary action at their end. And if there is any refund of cost amount (if cost deposited is more than the remaining cost), the details of the same has to be sent to the A/C s division as well.

- Select NIT Date, say 24.01.2015. The reason for selecting a date from previous financial year is that this financial year has not yet seen any Sale of either Wheat or Raw Rice Grade-A.
- Select Commodity as Wheat.
- Select financial year as 2014-15.
- View Result section – Browse and find and open the winning list and /or non-winning list .
Click Show to view the fields of the result in the box provided in the left-most pane of the page.

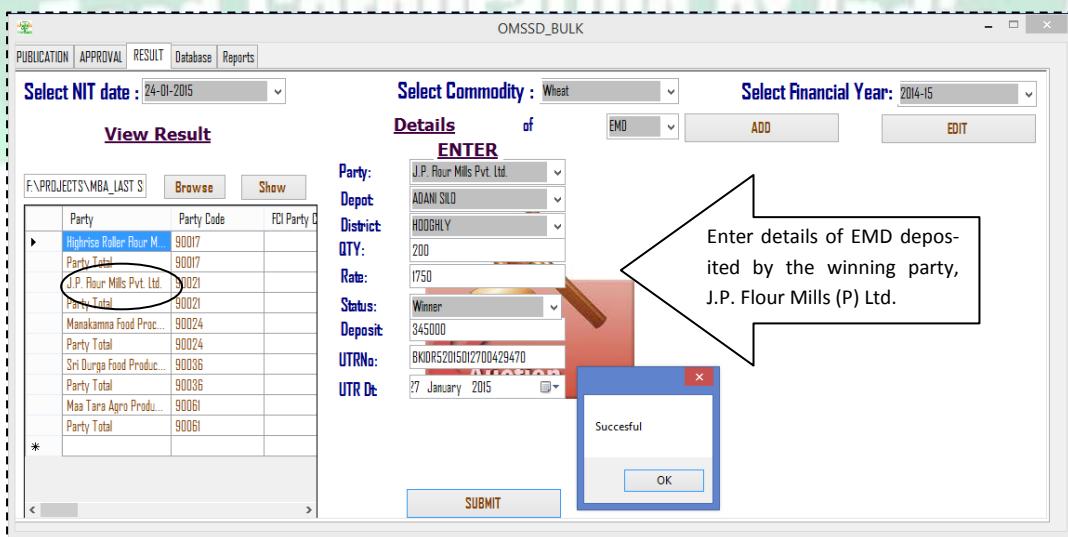

- Keeping the Winners' List opened on the left for convenience, enter the corresponding details by clicking on ADD after choosing Details of EMD.

- After entering the details click on Submit , successful message appears on fruitful insertion to DataBase.
- The details of all the winning parties are entered one by one.

BULK COST ION REFUND ION

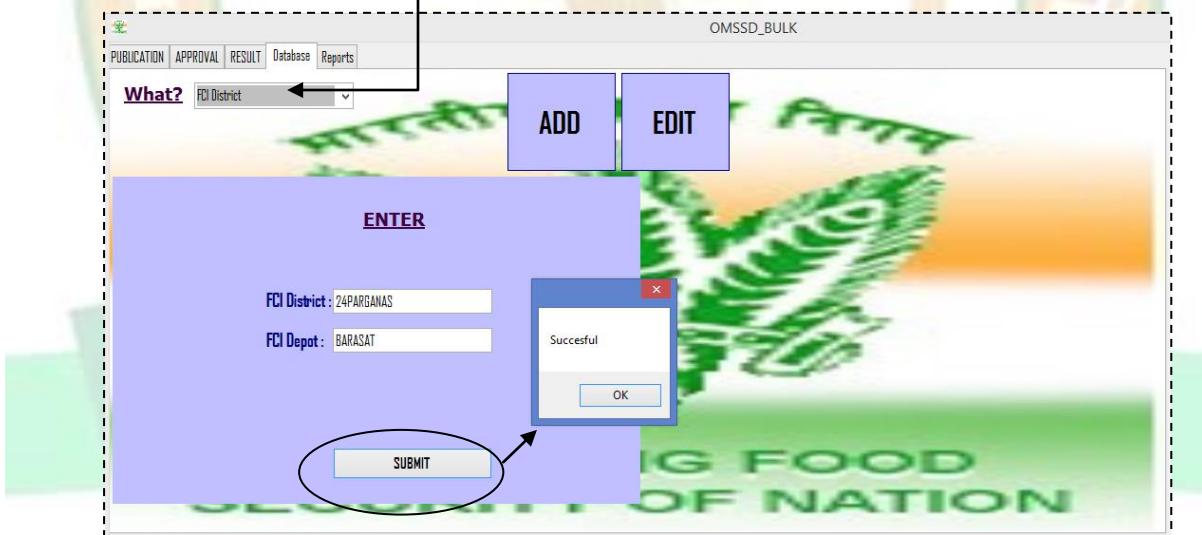

Module:4 DataBase

This module is basically designed to maintain a database of existing district and depots of Food Corporation of India

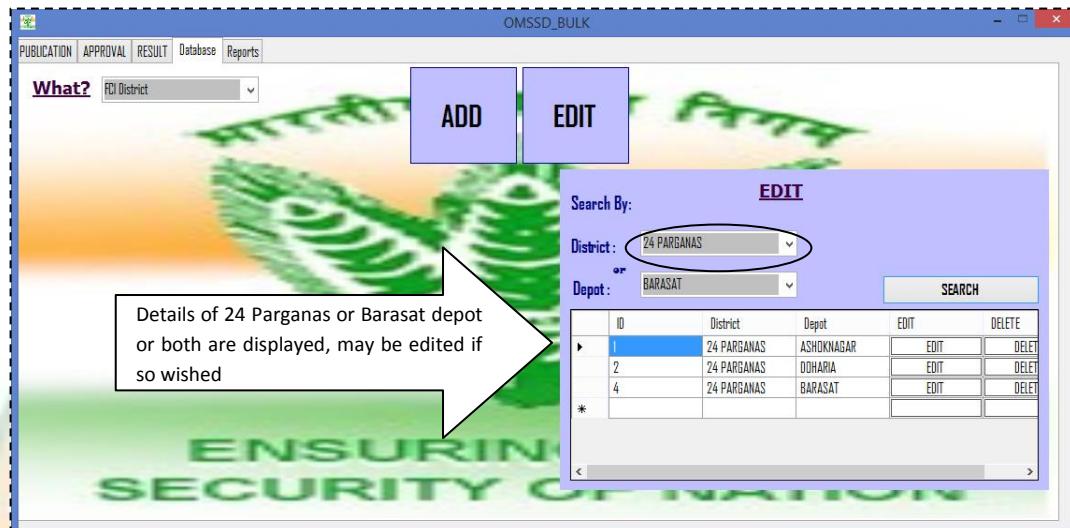

Also, personal details of empaneled parties (Bulk Consumers/ tenderers) for each financial year is maintained and regularly updated through this module.

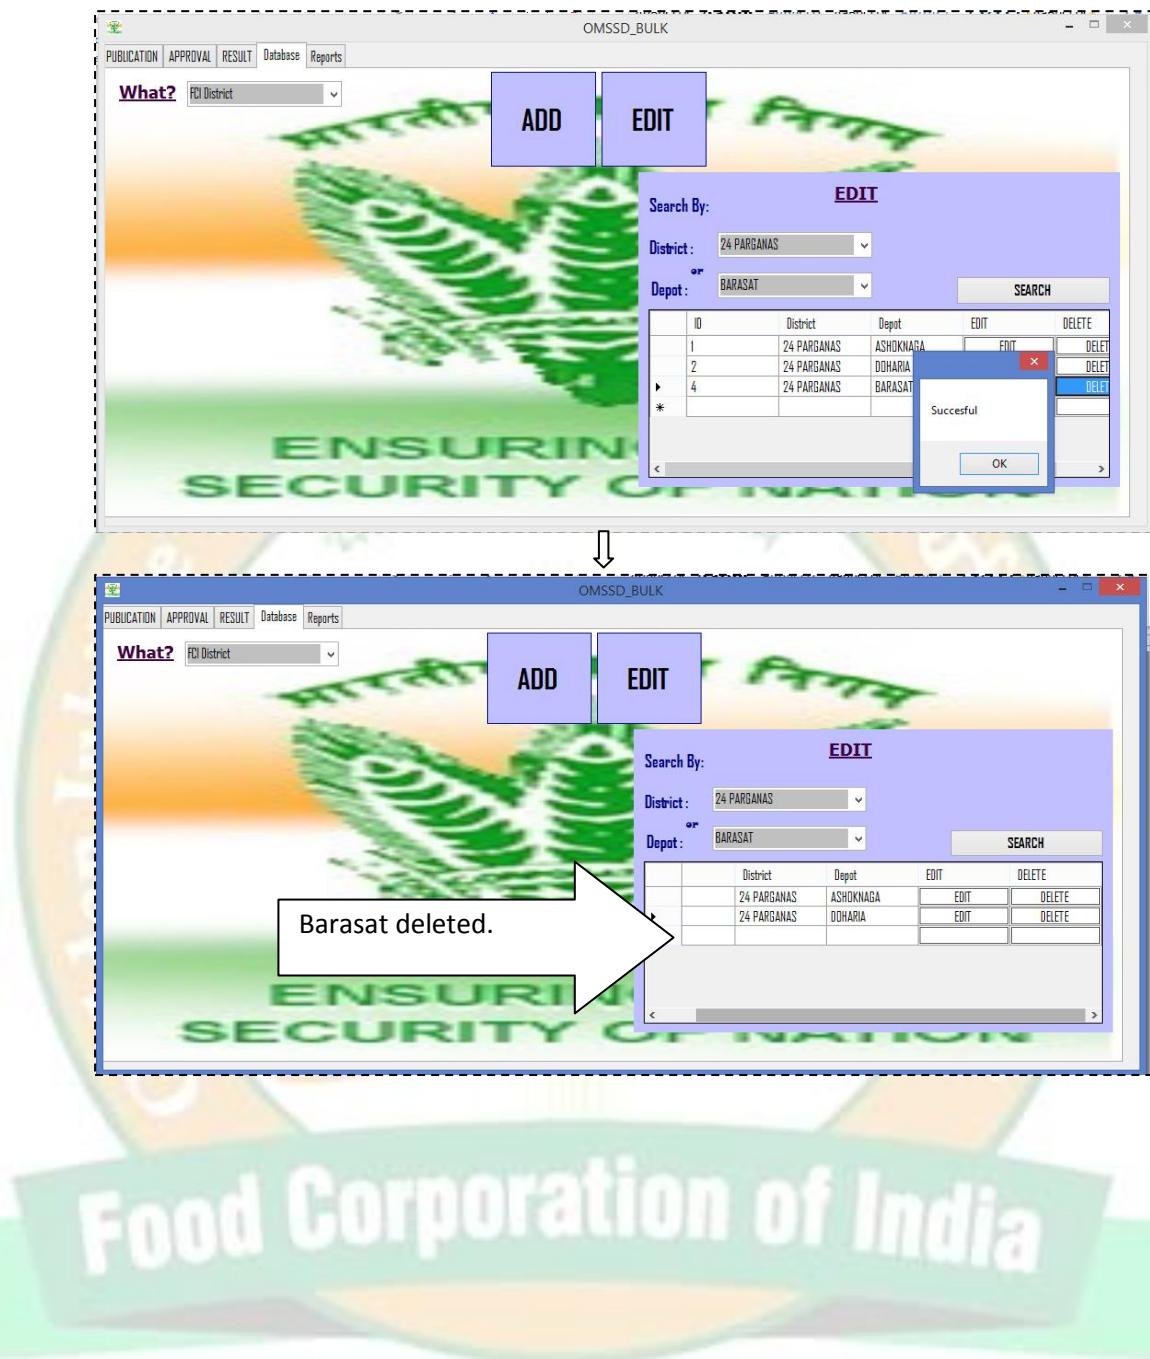

- Select What to add, say *FCI District* and then click on Add.
- The interface opens allowing user to add districts and depots corresponding to the districts.

- Now to edit the same, select FCI District corresponding to What? And click on EDIT.
- The interface now asks the end-user to select a district to edit or depot to edit and click on search.
- All depots corresponding to the district selected (24 Parganas) displayed. Now, if required can edit the details and click on edit provided in each row.

- If delete is pressed, entire row gets deleted, i.e. the depot(say, Barasat) corresponding to the selected district gets deleted.

- Now the same is followed for maintaining ,updating records of Empanelled parties.

The screenshot shows the 'ENTER' form for adding a new party record. The form fields include:

- Party Name:** [Text input]
- Address:** [Text input]
- Address2:** [Text input]
- District:** [Text input] **State:** [Text input]
- Pin Code:** [Text input] **Email:** [Text input]
- Empanelment Date:** [Text input] (18 July 2015) **Contact No.:** [Text input]
- Fin Year:** [Text input] (Select-2014-15) **SUBMIT**

At the top right, there are 'ADD' and 'EDIT' buttons. The background features a green and yellow graphic with the text 'ENSURING FOOD SECURITY OF NATION'.

The screenshot shows the 'ENTER' form with the following data entered:

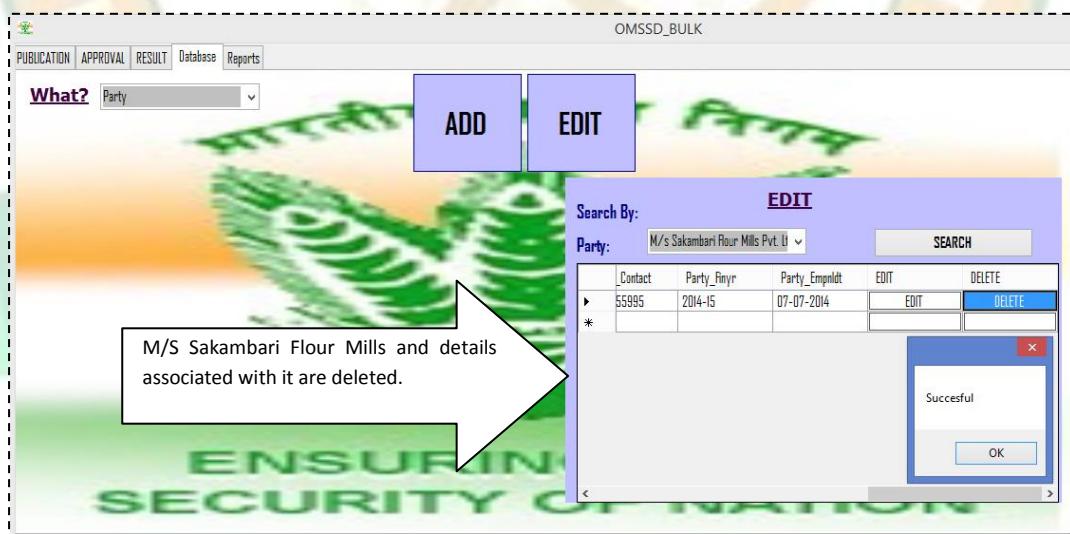

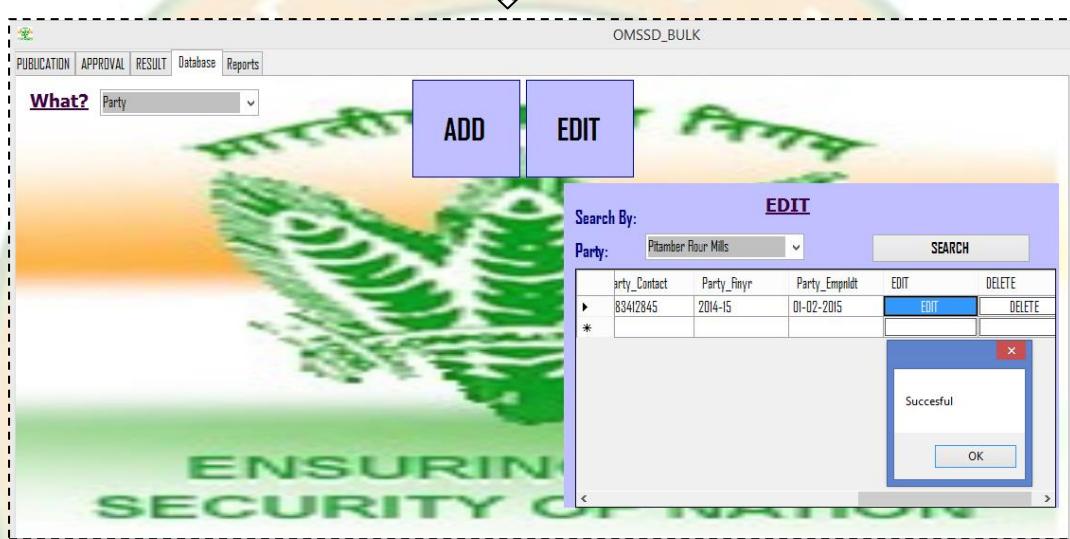

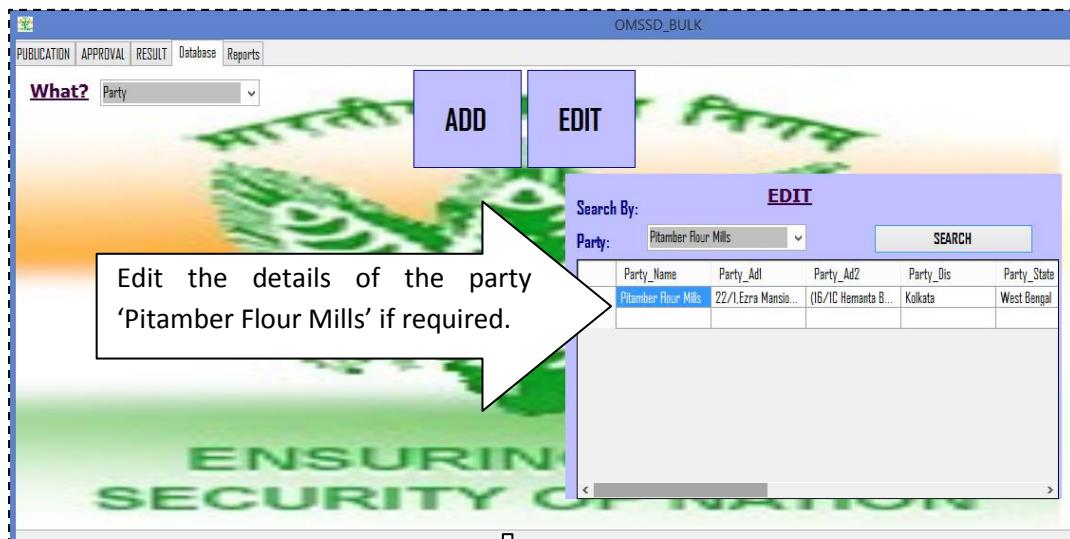

- Party Name:** Pitamber Flour Mills
- Address:** 22/1 Ezra Mansion, 10, Govt. Place East,
- Address2:** (16/C Hemanta Basu Sarani),
- District:** Kolkata **State:** West Bengal
- Pin Code:** 700069 **Email:** agarwalanjan@hotmail.com
- Empanelment Date:** 01 January 2015 **Contact No.:** 9883412845
- Fin Year:** 2014-15 **SUBMIT**

A message box in the center says 'Successful' with an 'OK' button. A callout bubble points to the 'Party Name' field with the text: 'Enter party 'Pitamber Flour Mills' details'. The background features a green and yellow graphic with the text 'ENSURING FOOD SECURITY OF NATION'.

The screenshot shows the search results for the added party record. The search criteria are:

- Search By:** Party
- Party:** [Text input] (Select- M/s Sakambari Flour Mills Pvt. Ltd., Pitamber Flour Mills)
- SEARCH**

An 'EDIT' button is located to the right of the search bar. The background features a green and yellow graphic with the text 'ENSURING FOOD SECURITY OF NATION'.

Module:4 Reports

Last but not the least, this application program presents to the end-user the module called 'Reports'. With the help of this module, the end-user can generate various kinds of reports rather the software does it for them just after selecting a few options and then, clicking on the mouse. This is yet another advantage of the software which the manual worker is devoid of. And this has been possible because of dynamic creation and maintenance of various kinds and number of databases where all the necessary data gets auto stored.

- Click on tab Reports.

- Select the kind of report to be viewed from the 3(three) kinds available, say the first one-Party-Wise Commodity-wise Sale from Depots in a financial year

- Immediately, the option to select a relevant party appears on screen.
- Select commodity Wheat or Raw Rice Grade-A., say Wheat.
- Select the financial year 2014-15.
- Now select a party whose report we wish to view. All the available parties relevant to the selected financial year are presented to the end-user to choose one from them.

Kind of Report: Party-Wise Commodity-wise Sale from Depots in a financial year

Search By: Commodity : Wheat Financial Year: 2014-15

Party: Ankit India Ltd. SEARCH

FinYr	Commodity	NITDate	Party	Depot	District	Qty
2014-15	Wheat	02-02-2015	Ankit India Ltd.	FSD JJP	PO	500
2014-15	Wheat	02-02-2015	Ankit India Ltd.	FSD DJM	NPD	500
2014-15	Wheat	05-01-2015	Ankit India Ltd.	FSD JJP	PO	700
2014-15	Wheat	05-01-2015	Ankit India Ltd.	FSD MIDNAPUR	MIDNAPUR	1200

Depot	Qty_Per_Depot
FSD JJP	1200
FSD MIDNAPUR	1200
FSD DJM	500

- All the relevant *details* corresponding to the party such as which NIT Dates it participated, how much quantity has been sold to it per NIT and from which depot and district.
- In addition to this, *depot-wise total quantity* sold to the selected party is auto calculated and displayed side by side.

- Now for the *second report*: District-wise Commodity-wise Sale in a financial year.

The screenshot shows the OMSSD_BULK software interface. At the top, there are tabs: PUBLICATION, APPROVAL, RESULT, Database, Reports, and a dropdown menu. The title bar says "OMSSD_BULK". Below the tabs, a search bar is labeled "Kind of Report : District-wise Commodity-wise Sale in a financial year". Underneath, there are search parameters: "Search By: Commodity : Wheat" and "Financial Year: 2014-15". A dropdown menu for "District" is open, showing options like "Select-", "24 PARBAS", "BANKURA", etc. A "SEARCH" button is visible. The background features a green and yellow design with the text "ENSURING FOOD SECURITY OF NATION".

- Select commodity as Wheat and financial year as 2014-15.

This screenshot is similar to the previous one, showing the OMSSD_BULK software interface. The "District" dropdown menu now has "Midnapur" selected. The other parameters remain the same: Commodity is "Wheat" and Financial Year is "2014-15". The background design with the text "ENSURING FOOD SECURITY OF NATION" is present.

- Select a district from the available ones, say Midnapur.

This screenshot shows the OMSSD_BULK software interface with the "District" dropdown menu open, displaying a list of districts. "MIDNAPUR" is highlighted in blue, indicating it is the selected option. The other parameters are the same as before. The background design with the text "ENSURING FOOD SECURITY OF NATION" is visible.

- The *details* like which party has bought how much quantity of Wheat and from which Depot of the selected District, Midnapur are displayed.

Kind of Report : Depot-wise Commodity-wise in a financial year

Search By:
Commodity : Wheat Financial Year: 2014-15
Depot : -Select-

SEARCH

- Select Commodity as Wheat and financial year 2014-15.
- Select one of the available depots, say FSD Midnapur.

- The *details* like which party has bought how much quantity of Wheat from the depot selected against which NIT Date are displayed.

The screenshot shows the 'OMSSD_BULK' software interface with the search parameters: 'Commodity: Wheat', 'Depot: FSD MIDNAPUR', and 'Financial Year: 2014-15'. The results table displays a list of purchases for the year 2014-15, categorized by NIT Date. To the right of the main table is a smaller table showing the total quantity per party.

Party	Dty_Per_Party
Aakash Food Products Private Limited	1800
Ankit India Ltd.	1200
Fine Flour Mills (P) Ltd.	500
M/s Ganpati Flour & Foods (P) Ltd.	400
M/s Megha Agri Food Products Pvt Ltd	150
Manakamma Food Processing Pvt. Ltd. (Unit-I)	2000
Pitamber Flour Mills	1000
Reform Flour Mills Pvt. Ltd.	500
Srisiddhi Foods Agro Pvt. Ltd.	500
Vishnu Agri Foods Pvt. Ltd.	500

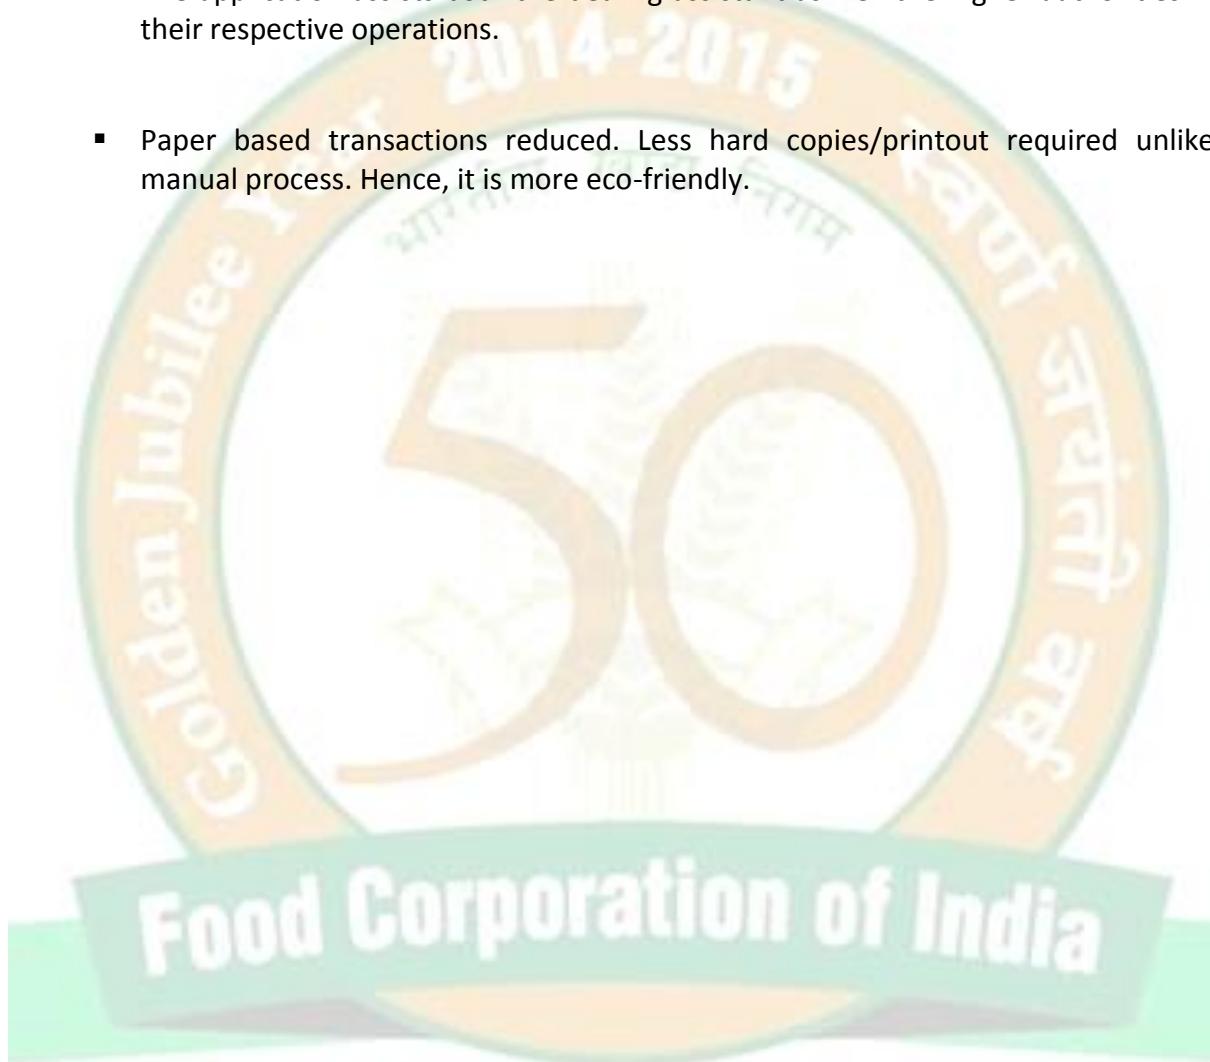

- Also the *total quantity per party* for the selected depot is auto calculated and displayed.

1.6 Beneficial impacts

- This application comes with the obvious *time advantage* like any other office automation solution. The work is done a thousand times faster than in the manual operations and hence, the remaining time could be utilized by the dealing officials for other productive purposes such as strategic decision making.
- *Simple, user-friendly interface.* Minimum one-time training is sufficient to understand its working details. Hence, even the old, orthodox people who shy away from technology would be less apprehensive of using this application instead of doing it manually.
- Features like auto duplicity check while entering the same data twice, dynamic calculation of fields, auto generation of PDF files (AD,NIT,I.O.Ns) in the required official format and with all repeated and variable data correctly inserted in it automatically without the end-user having to worry about them were unavailable in manual process. Also, the dealing official/end-user no longer has to print hard copies of reports, downloaded from FCI food grains website or received through Emails, which are required to be referred to while deciding how much quantity is to be offered for Sale per depot per tender and then, mark the required fields in them with a highlighter and finally enter them one by one in an Excel sheet. The application provides the end-user with a beautiful interface where the reports can viewed in the left pane, while entry can made in the middle section of the screen simultaneously. These features help *abolish repetitive tasks, increase convenience of the job* and thus, reduce time and *enhance efficiency* of doing a task
- *Digital storage* of useful information related to the operation and *retrieval* of the same any time later in the form of various kinds of reports generated from the Reports module of the application just on selection of the required options scores over the manual process. Previously, once a financial year completes, all kinds of reports in different formats regarding the overall Sale in the year needs to separately prepared in Excel Sheets. The introduction of this application not only would save time and labour but also would ensure retaining and storage of digital data throughout its lifetime without any fear of misplacing or damage of hard copies of reports.
- The technology required to develop the application is easily available. Every office in FCI is already provided with computers with Ram -1GB and above, hard drive memory-500GB and above, Windows 7 and above OS, MS Office 2007. So, .Net framework 4.5 and above gets installed along with the OS and MS Access 2007 and above comes in the MS Office 2007 and above suite. The remaining Visual Studio 2013 (Express Edition) software required to develop the front-end interface (design and coding) can easily be downloaded for free from Microsoft website if one has an account. Hence, no need of buying any of the softwares. The application is actually developed with the *pre-available technology* in FCI offices. This re-

duces the cost of developing the application to a huge extent and hence, removes one critical bottleneck to its implementation since this organisation, being formed as a non-profit one, would prefer not to invest much in technology.

- This organisation has forever suffered from the disadvantage of insufficient manpower. Well, after successful implementation of this automated application, a single work would require *less staff, less time* than usual and one employee can multi-task without the fear of being over-burdened.
- The application assists both the dealing assistant as well the higher authorities in their respective operations.
- Paper based transactions reduced. Less hard copies/printout required unlike manual process. Hence, it is more eco-friendly.

9.Further Scope

Apart from the above stated benefits, the application also provides for the following future provisions:

- The underlying paradigm remaining similar, all other Sales Operations viz. Allocation, Extension, Diversion and Lifting of FoodGrains presently carried out manually can be like-wise automated for which the entire design and programming codes of the above application can be utilized with only a few minor changes here and there.
- Once development is complete, all the application projects can be integrated as one and run from a common solution (platform).
- Also, the manual operations being carried out in various other departments vital to the functioning of FCI may be automated following the footsteps of the above and merged together. Once this is done, a common interface may be provided asking the user to select respective department, then requiring to enter valid username and password for authorization to access the features of only the corresponding application and the rest would be hidden. This increases simplicity and enhances security.
- Last but not the least, taking automation 1(one) step further, the integrated application in its final form may be extended to its online version and deployed in the LAN Network which has recently been in place connecting all departments of FCI in a particular office location. Thus, the same copy of the application may be shared by all and sundry without any hassle or security worries. RDBMS concurrency control and the afore-stated security controls would already be in place.

The detailed description of the above features are beyond the scope of the present documentation and hence, stated as under further scope.

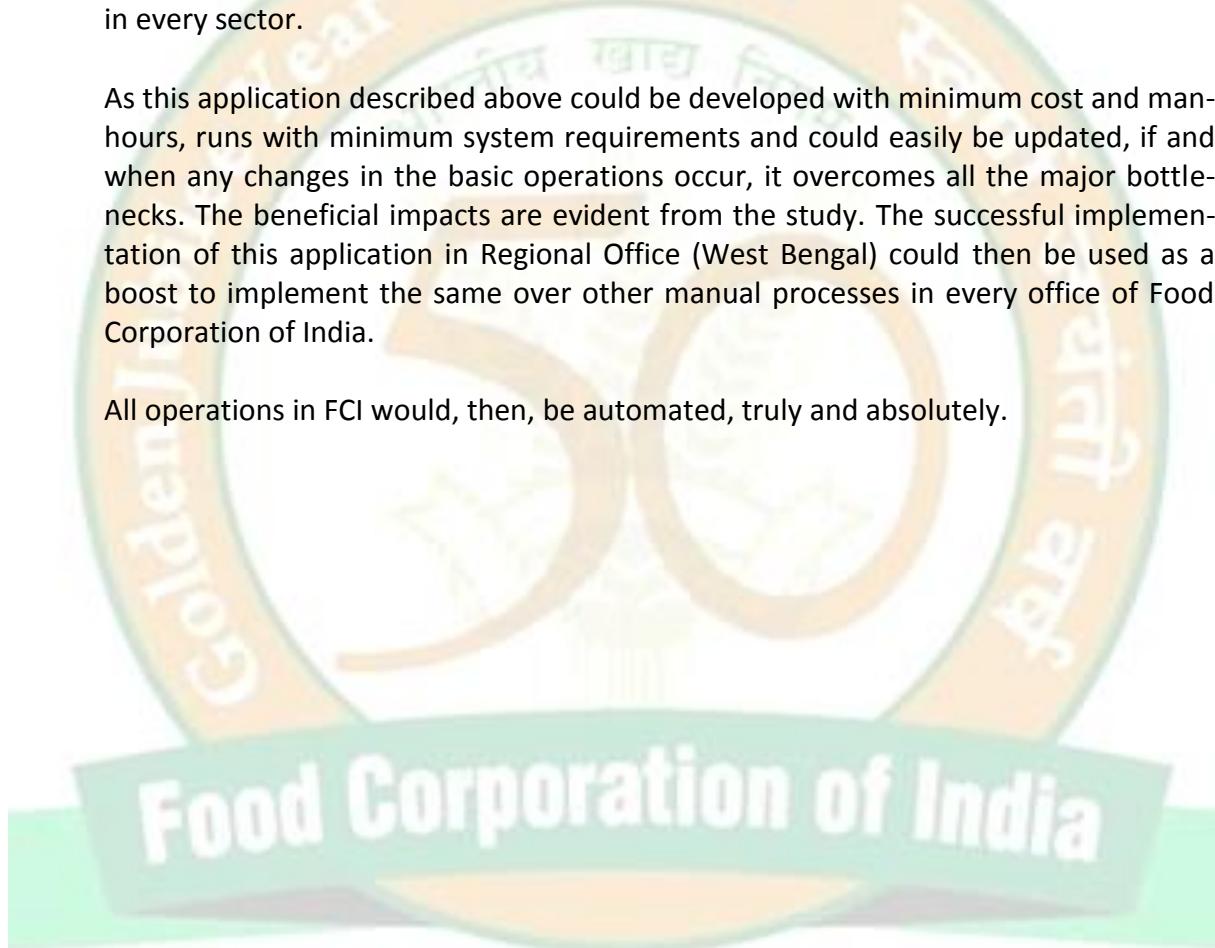

10. Conclusion

As is evident, Automation in Offices is the need of the hour.

Government of the developing countries like India cannot stay aloof from it. Although carrying with it the obvious demerits like unemployment, huge cost, improper infrastructure, lack of training and fear in the minds of orthodox untrained personnel, the automated processes do make our jobs easy and help increase productivity in every sector.

As this application described above could be developed with minimum cost and man-hours, runs with minimum system requirements and could easily be updated, if and when any changes in the basic operations occur, it overcomes all the major bottlenecks. The beneficial impacts are evident from the study. The successful implementation of this application in Regional Office (West Bengal) could then be used as a boost to implement the same over other manual processes in every office of Food Corporation of India.

All operations in FCI would, then, be automated, truly and absolutely.
